## P R E F A C E

The purpose of this book is to present for the first time certain important conclusions about American churches drawn from a study of the significant data collected by the *Federal Census of Religious Bodies*. As most of the basic figures collected by the Census Bureau have been included in its official reports, no attempt has been made to reproduce them here. Rather the effort has been to get at the meaning of the Government's returns by relating them to such factors as population changes and fluctuations in the purchasing power of the dollar.

In the main, the book deals with answers to eight simple questions: What Proportion of Americans Belong to Church? To What Denominations Do They Belong? How Are Churches Geographically Distributed? How Rapidly Are Churches Growing? Is the Sunday School Declining? To What Extent Are Ministers Academically Trained? What Is the Value of Church Property? How Much Do Churches Spend?

This analysis has made use, not only of published Census figures, but also of certain material which the Government did not publish, notably data on the academic training of ministers and also on the number of churches that ministers serve. To avoid cluttering the text with long and forbidding tables these data, together with certain derived figures that are basic to the analysis, have been relegated to a statistical appendix in the back of the book. Studious readers are referred to these materials, which provide not only a means of substantiating certain of the generalizations here presented, but also a basis for carrying the analysis further than was possible in a work whose sole aim was to reach a few important conclusions from the enormous mass of information collected by the Government.

Before undertaking to evaluate Census figures it is necessary to say a word about their accuracy. How reliable are the Census data? This is a question that cannot be answered offhand, but there are reasons for thinking that the returns are unusually accurate for social information of this character. The Govern-

ment has certain outstanding advantages in the collection of information. The mere fact that the investigation is an official one tends to give standing to the study. A person is far more likely to answer a request for information if it comes from the United States Government than if it comes from almost any other source. Moreover, an examination of several thousand questionnaires sent in to the Census Bureau reveals that most of them were completely and apparently carefully filled out. In many cases, the recipient took the trouble not only to answer the questions but to append explanatory remarks.

The Government also has the advantage of the close and active coöperation of many denominational representatives. Indeed, certain church executives look upon the Federal Census as a means of improving their own records. In addition, the Census is able to make use of special facilities for gathering data. It enjoys the free use of the mails and thus can easily afford to embark upon an intensive letter-writing campaign including the sending of many thousands of follow-up letters.

Finally, the Government can avail itself of other resources such as the use of special field agents and the coöperation of postmasters. If a local church persistently refuses to reply to the Bureau's questionnaire, a letter can be sent to the local postmaster asking for his aid in getting reliable information about the recalcitrant organization. As a result, the Census information about the number of churches is virtually 100 per cent. complete.

The general feeling of confidence in the Census Bureau's findings is confirmed and strengthened by comparing the Government's returns with a few strictly comparable items collected by a number of denominations having well-established reporting systems of their own. An analysis of the published statements from sixteen denominations representing about seven-tenths of the entire number of church-members in the United States, reveals that in no case did the Government figures for membership differ from the denominational returns by as much as 10 per cent., while the average difference was only 2 per cent. So far as church expenditures are concerned, the average difference was only 1.5 per cent. It is significant that in the case of both membership and expenditures the Census findings tend to be slightly more conservative than the denominational data.

In the light of these facts, it seems conservative to conclude that the findings of the *Federal Census of Religious Bodies* are sufficiently reliable, and furnish by far the most complete and dependable source of information in this field.

Although this book is based mainly upon official data, the analysis carries the interpretation considerably farther than the Census Bureau is accustomed to go. The Government should in no way be held responsible for the use made of its figures.

The author takes this occasion to thank the Census Bureau officials for their invaluable coöperation in giving him access to the Government's data. Mary Frost Jessup was responsible for directing the statistical work in this analysis.

THE U. S. LOOKS AT  
ITS CHURCHES

## *Chapter I*

### INTRODUCTION

Just as the Government regularly takes a census of population, so it also takes every ten years a census of religious bodies which secures basic facts about the churches in the Continental United States—Roman Catholic, Protestant, Jewish, Mormon, and all others except Mohammedan mosques and Hindu temples. A questionnaire is sent to each local church requesting precise information as to its location, denominational affiliation, membership, Sunday-school enrollment, value of church buildings and expenditures for the year.

According to the Census, a local church organization is a gathering of individuals for religious services or worship. It may have officers and an enrolled membership, or it may be little more than an association or fellowship, but to be included in this enumeration it must have a religious purpose and a distinctive membership. Throughout the Census, each organization of this kind was classed as a church whether it was commonly known as a church, a synagogue, a congregation, or by some other name.

The chief purpose of the present study is to draw from the Census figures new and important information of a general character about the churches.

In the first place, the Census figures for 1926 bring out the magnitude of the church enterprise in this country. According to the latest returns there are 212 separate denominations having 232,000 churches and 44,380,000 members over 13 years of age. Denominational Sunday schools have an enrollment of more than 21,000,000 pupils, and even this figure excludes the pupils in undenominational Sunday schools and in parochial schools. The value of church edifices alone, not including such items as pastors' residences, investment property, school buildings, hospitals, etc., is reported as \$3,800,000,000, while for 1926 the total expenditure of local churches amounts to \$817,000,000. Such

figures testify to the importance of the churches in American life.

Some measure of the vast dimension of organized religion in the United States can be formed by contrasting data for public schools with those for churches. The 232,000 churches compare with 256,000 public-school buildings. The total number of 21,000,000 Sunday-school scholars is less by only 3,700,000 than the pupils in all the public elementary and secondary schools. The annual church expenditures of \$817,000,000 are 40 per cent. as large as the expenditures of public schools. Clearly, organized religion is an enormous social enterprise.

Since the 1926 Census tabulated for the first time rural and urban figures separately, it is now possible to indicate certain of the differences between city and country churches. The average rural church has a total of 98 adult members<sup>1</sup> who worship in a church building worth almost \$6,200, and who expend annually \$1,400 per church or \$13.27 for each member 13 years of age and over. On the other hand, the average city church has a reported adult membership of 433, its church edifice is worth \$53,500, and its annual expenditures amount to \$10,000, or \$21.50 per adult member. For Negro congregations the average rural church has 83 adult members who worship in a church building valued at \$2,000 and expend annually \$6.20 each. The urban colored church has 199 adult members, a building worth more than \$16,000, and an average expenditure of \$13.06 per adult member. These figures bring city and country conditions into sharp contrast.

The total number of adult persons listed on the rolls of churches is about 55 per cent. of the country's adult population. In other words, about every other person belongs to a church.

The proportion of the adult membership belonging to the different religious groups varies from state to state. The South is the stronghold of Protestantism. Eleven states report at least nine out of ten members as Protestants, and every one of these commonwealths is below the Mason-Dixon line. The church-membership of the industrialized East, with its large numbers of foreign-born from southern Europe, and of the southwestern states, with their Spanish origins, is predominantly Roman Catholic. Jews are particularly numerous in New York City,

<sup>1</sup> As defined by the *Census of Religious Bodies* an adult member is one who is 13 years of age or over.

while Mormons claim nine-tenths of the church-members in Utah.

There is not a single state in which either the Jews or the Roman Catholics constitute the majority of the population; but there are nine southern states in which Protestants make up more than half the total. The record, however, is held by Utah where four-fifths of the inhabitants are Mormons.

The Census returns stress the diversity of organized religion in this country. The very fact that, exclusive of Oriental faiths, the Bureau lists 212 separate denominations is a striking commentary upon the present religious situation. Within recent years, however, there has been a significant tendency for church bodies to combine. Between 1916 and 1926 no fewer than eighteen denominations were involved in mergers and amalgamations, while only one organization split into two.

Most denominations are small, more than half having adult memberships of less than 7,000. All bodies, even the larger ones, are highly concentrated geographically. There are only three bodies—the Methodist Episcopal Church, the Protestant Episcopal Church, and the Roman Catholic Church—which have as many as three congregations in every state in the Union.

Because the Religious Census has collected basically comparable statistics for 1906 and 1916 as well as for 1926, the necessary information is at hand to answer the question whether church-membership is growing more or less rapidly than the population. After making allowance for recent changes in the definition of a member adopted by several large denominations, the fact is that during the past two decades the nation's adult church-membership has increased at almost exactly the same rate as its adult population.

During recent years, Sunday-school enrollment has been increasing less rapidly than formerly. A generation ago the number of pupils in Sunday schools was equivalent to 40 per cent. of the population under 19 years of age. By 1916 this percentage had reached 48; but it has now decreased to 44 per cent.

The Roman Catholic Church reports a decided decline in Sunday-school scholars along with a definite increase in the enrollment of its parochial schools. From 1906 to 1926 the rate of increase in the enrollment of parochial schools was nearly twice that of public elementary and secondary schools.

An analysis of unpublished Census materials covering twenty-one leading denominations representing 74 per cent. of the entire number of churches in the United States, shows that almost three out of eight ministers of eighteen white denominations and more than three out of four ministers of three large Negro bodies do not claim to be graduates of either college or seminary. Even these figures are conservative because the Government gave the ministers the benefit of the doubt when it came to classifying uncertain cases.

The Roman Catholic priests generally report longer academic training than the ministers of seventeen white Protestant bodies. Instead of 41 per cent. falling into the class of non-graduates as in the case among the Protestant group, only 6.6 per cent. of the priests were so classified. Moreover, 68 per cent. of the priests claimed to be graduates of both college and seminary, compared with less than half this proportion for the white Protestant pastors.

Among white Protestant bodies, rural-urban differences in ministerial training are striking. In cities only one out of five of the ministers of seventeen white Protestant denominations report that they were neither college nor seminary men while in rural areas this proportion is more than one out of two. It is especially noteworthy that eleven of the twenty-one large denominations studied, report that half their rural ministers are not graduates of either college or seminary.

Returns from the 172,000 churches of the twenty-one selected denominations show that only half had pastors with but one charge, while 4,130 reported that their pastors were serving seven or more churches.

From certain standpoints, the most remarkable figures secured by the 1926 Census have to do with church finances. During the last decade, the growing economic prosperity of the United States brought to the churches a period of unprecedented material prosperity. During the ten years from 1916 to 1926, the value of church edifices alone increased \$2,163,000,000 or 129 per cent. During the same period the general level of prices, as indicated by the Government's combined index of retail food prices, rose only 41 per cent., or a third as rapidly.

Improvement in the material prosperity of the churches is even more clearly brought out by their expenditure figures. The

annual sum spent by all local churches has increased one-and-a-half fold since 1916. When it is remembered that religious funds are not taxable, it becomes obvious that the Church is not only a great but a growing interest that enjoys special privileges.

The evidence for these and other generalizations about American churches are presented in detail in the pages that follow.

## *Chapter II*

### WHAT PROPORTION OF AMERICANS BELONG TO CHURCH?

What proportion of the people of the United States are church-members? Is it true that church enrollments are chiefly composed of women? Do Negroes belong to church in appreciably greater numbers than do white people? To what extent does the proportion of the population that belongs to church vary from one section of the country to another? Are the people in great cities as likely to join church as those in smaller centers? These are the kinds of questions that the present study will attempt to answer.

#### PROPORTION OF AMERICANS IN CHURCH

Since the Government collects and tabulates the membership of each local church in the Continental United States, it would seem to be a simple matter to find the proportion of the population that belongs to church. In reality, however, the problem is complicated because the word "member" does not mean the same thing to all denominations. The membership figures secured by the Census from any church give the number of individuals who are considered by the church itself to be constituent parts of the organization. To a Roman Catholic, all persons, even infants, are members provided they have been baptized according to the rites of the Church, while at the other extreme are certain Protestant bodies that count as members only those persons who, after they have formally applied for membership at an age when their decision is considered mature, are then enrolled as members. Between these two extremes there is nearly every variety of interpretation. Thus, the total membership figure secured by merely combining the separate returns reported to the Census Bureau, has no very clear-cut significance because it is obtained by adding together very different types of membership data.

There is no entirely satisfactory way of making membership returns strictly comparable among denominations; but a reasonably comparable basis can be attained by eliminating entirely the children under 13 years of age. This adjustment is made possible because the Census Bureau, recognizing the difficulty inherent in the use of total membership figures, asks each church to report separately the membership "under 13 years of age" and "13 years of age and over." These subtotals are not furnished by all churches; nevertheless, since the vast majority do furnish them, it is possible to estimate with a high degree of accuracy the country's membership 13 years of age and over. Such figures, which are given by states in Appendix Table I, show that in 1926 the "adult" church-membership, or in other words, the members 13 years of age and over, was roughly 44,380,000.

When the country's adult membership has been worked out, it is a relatively easy matter to arrive at the proportion of the population that belongs to church. All that remains to be done is to compute the estimated adult population. Official population estimates are published regularly each year by the Federal Government and show that on July 1, 1926, the total for the country was placed at 117,000,000. Eliminating the children, the adult population of the United States for 1926 becomes almost exactly 80,000,000. Since 44,380,000 of these people are on church rolls, 55 out of each 100 adults living in the United States are enrolled as church-members.

#### SIGNIFICANCE OF MEMBERSHIP FIGURES

It may be felt that this ratio tends to overestimate the strength of the church because of the well-known fact that membership rolls often contain the names of a good many inactive individuals. For example, an analysis made several years ago of 140,000 members on the rolls of Protestant churches in villages,<sup>1</sup> shows that 18 per cent. of the members who could be checked up had to be classified as "inactive," that is, as persons who did not attend church regularly and contribute to its support. This might seem to prove that the ratio of membership to population tends to exaggerate the importance of the church; but there is

---

<sup>1</sup> Brunner, *American Agricultural Villages* (New York; Institute of Social and Religious Research, 1927), p. 306.

# WHITE AND NEGRO ADULT POPULATION IN CHURCH BY SEX 1926

equally convincing evidence that membership ratios are too low. The policy among denominations of apportioning assessments on the basis of a congregation's membership makes for conservatism in reporting such figures. Moreover, it is a matter of common knowledge that some people participate in church activities even though they are not church-members. Statistics collected in connection with the last official population Census of Canada show that in response to the request—"Name the denomination to which you belong or are affiliated"—nearly two and a half times as many people claimed allegiance to the Methodist Episcopal Church as were reported to be members by the denomination itself.

Among the most convincing evidences that membership ratios are highly significant is the fact that these ratios are closely interrelated with attendance at church, as was shown by an intensive study completed in 1924 of thirty-two widely scattered counties.<sup>2</sup> As a rule the counties that have a relatively large proportion of their population on the church rolls make high attendance records.<sup>3</sup>

In the light of these facts the conclusion seems warranted that the proportion of the adult population belonging to church is a significant social index. Certainly it is an important fact that in the United States more than half the people 13 years of age and over are on the membership rolls of the churches.

#### MEMBERSHIP BY SEX AND BY RACE

It is often stated that the great majority of church-members are women. This is an issue that can be answered with confidence by an analysis of Census figures, because the Government asks each church to report separately the number of men and of women in the membership. Returns on this point were received from most of the churches and show that five women are church-members to each four men. This means that on the average there are 125 female members to every 100 male.

The preponderance of women on the church rolls is the more striking when it is remembered that the total number of men living in the United States is appreciably greater than the num-

<sup>2</sup> Fry, *Diagnosing the Rural Church* (New York; Institute of Social and Religious Research, 1924), p. 110.

<sup>3</sup> The actual Pearsonian coefficient of correlation is +.91; perfect correlation would have been +1.00.

# ADULT POPULATION IN CHURCH BY DIVISIONS

1926

Note: width of bars proportional to adult population in each group

ber of women. The 1920 Census of Population found that there were 104 males to every 100 females.

These data make it possible to compare the relative number of adult men and of adult women that belong to church. On the reasonable assumption that the ratio of men to women was the same in 1926 as in 1920, it follows that 48 per cent. of the men are church-members, contrasted with 63 per cent. of the women. This striking difference bears out the contention that churches have a decidedly greater hold upon women than upon men.

Negro women are particularly attracted to the churches. The number of colored women 13 years of age and over included on the rolls of Negro churches represents 73 per cent. of the total number living in the United States, while for white women this ratio is 62 per cent. Interestingly enough, Negro men not only make a far lower showing than the colored women but even lower than the white men. Only 46 per cent. of all adult Negro men are in church, compared with 49 per cent. among the white men. These findings tend to explode the idea that the church has a peculiar hold upon the Negro temperament. Certainly, if interest in organized religion was primarily the result of a racial attitude of mind, this factor should influence Negro men as well as women.

#### GEOGRAPHIC DIFFERENCES

The proportion of the adult population belonging to church varies not only between men and women and between Negroes and whites, but also from area to area. For all the commonwealths and for most of the large cities, the Government itself furnishes careful population estimates for 1926 based upon the Federal enumeration of 1920, or, when available, upon 1925 State Census figures. This information makes it possible to arrive at the percentage of the adult population in church both for different states and for cities of varying size. Even though the Government's population figures are estimates, they are believed to be quite reliable as a basis for making broad generalizations.

The data show that the proportion of the adult population in church is comparatively high in the southern and eastern states; somewhat lower in the Middle West, and considerably lower in the Far West. Utah with its large Mormon population forms

an outstanding exception to the general rule. This state, with nine-tenths of its adult population on the church rolls, has an even higher proportion of its population in church than states like North and South Carolina and Alabama, which make the best record in the East with more than 7 out of every 10 adults on the church rolls. Most western states have comparatively few church-members. In Washington, Nevada and Montana fewer than 3 out of every 10 adults are enrolled in church. The conclusion therefore seems warranted that the church is much more firmly established in the older sections of America than in the more newly settled areas.

In every area the relative number of women in church is appreciably greater than the relative number of men. The highest proportion is found in the East South Central division (Kentucky, Tennessee, Alabama and Mississippi), where nearly three-fourths of the women are church-members, but only about half the men. In New England, on the other hand, the relative number of men in church most nearly approximates the similar figure for the women. In this area 56 per cent. of the men are on church rolls compared with 67 per cent. of the women.

The proportion of the adult population that belongs to church is correlated with basic social conditions. Official statistics make it possible to compute the 1926 suicide rate for all but 3 of the 48 states in the Union. Such figures show a close relationship with membership ratios. In those states in which the suicide rate tends to be high the proportion of the population in church tends to be low.

Of course, this fact does not necessarily mean that the large proportion of the population in church is the cause of low suicide, but it is one indication that the status of the church is closely interrelated with fundamental social conditions. Another is that the contributions of members to their churches are closely related to economic conditions. For example, the average contribution of rural members from state to state is significantly correlated with farm values.<sup>4</sup>

---

<sup>4</sup>The Pearsonian coefficient of correlation of the per cent. of the adult population in church with the suicide rate per 100,000 population is  $-.62$ ; and with the divorce rate per 1,000 of the married population it is  $-.48$ . The coefficient of the average contribution of rural members with the average farm value is  $+.48$ ; and with the average farm sales income  $+.40$ . Untrained ministers correlated with illiteracy have a coefficient of  $+.68$ .

## URBAN AND RURAL MEMBERSHIP

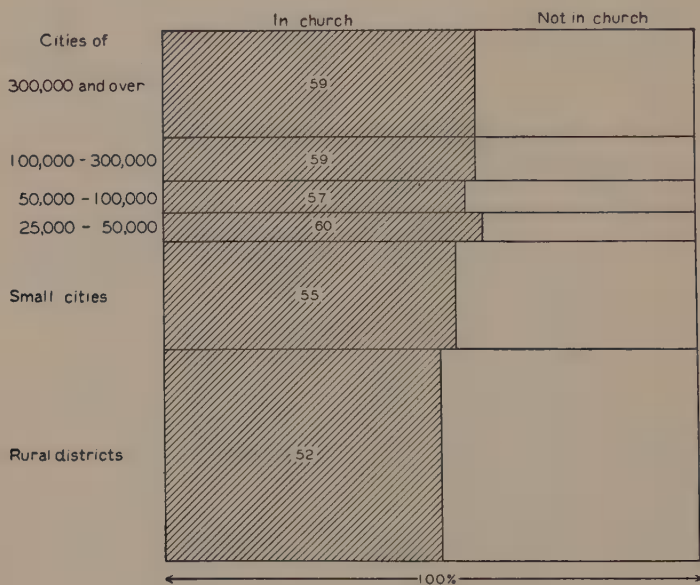

The general belief in the superiority of rural life, epitomized in Cowper's famous line, "God made the country, man made the town," might lead some to expect that the church would be comparatively weak in great urban centers. This, however, is not the case, as is clearly brought out by the 1926 Census which tabulated for the first time returns from rural and from urban churches separately. By an urban church was meant one that was situated in an incorporated place that in 1920 had at least 2,500 inhabitants, while a rural church was one located outside such a center. This information, which makes it possible to estimate accurately the adult members in rural areas, shows that of the 44,380,000 adult church-members in the United States, approximately 16,500,000, or 37 per cent., fall into the rural class. Government reports also furnish a fairly adequate basis for estimating the adult population in these rural areas. Taking into account the post-war exodus from farms, it seems conservative to conclude that in 1926 the adult population comparable with the adult rural membership figures was approximately 32,000,000.<sup>5</sup> Thus only 52 per cent. of the rural population of the United States belongs to church, compared with 58 per cent. for all cities. This comparison may be slightly modified, because the country people who belong to city churches probably outnumber the city people who belong to country churches; but this factor alone can hardly affect the conclusion that urban people belong to church in relatively greater numbers than do country people. This does not necessarily mean that country folk are less interested in organized religion than are the inhabitants of cities. Rather the low rural ratio reflects differences in opportunity arising from the fact that many sparsely settled country areas have no churches.

## MEMBERSHIP IN CITIES OF VARYING SIZE

One might imagine that church-membership would be comparatively low in great centers like New York and Chicago. Certainly in these metropolitan areas the churches have to com-

<sup>5</sup> This estimate is based in part upon figures compiled by the leading authority in this field, Dr. Charles J. Galpin of the United States Department of Agriculture, and published in the United States Department of Agriculture Yearbooks for 1926 and for 1927.

# ADULT POPULATION IN CHURCH IN PLACES OF VARYING SIZE 1926

Note: Width of bars proportional to adult population in each group

Chart V

pete for public attention with unusually large numbers of other agencies and interests. Nevertheless the proportion of people in church does not vary with a city's size. Places with 300,000 inhabitants and over have 59 per cent. of their adults in church, which is identically the same as the ratio for cities having 100,000 to 300,000 people. Cities from 50,000 to 100,000 report 57 per cent.; those from 25,000 to 50,000 have 60 per cent., while large towns ranging from 2,500 to 25,000 inhabitants return 55 per cent. Obviously, the mere size of a city does not seem to influence the relative number of people belonging to church.

There are, however, significant differences from city to city. Among the great centers having 300,000 or more inhabitants, the Pacific cities of San Francisco, Seattle and Los Angeles report small proportions in church, with but 40 per cent. or less. Kansas City (Missouri), Minneapolis, Indianapolis, and Washington, D. C., show from 44 to 50 per cent.; Cincinnati, Milwaukee, Chicago, Cleveland and Baltimore, from 50 to 60 per cent., while Detroit, Newark, Philadelphia, Buffalo, St. Louis, Boston, New York and Pittsburgh report over 60 per cent.

The comparatively large proportion of church-members in a city like New York is influenced by the large number of Jews living there. This denomination, in sharp contrast with the definition it previously employed, now considers as members all Jews living in communities where there is a congregation. Thus Jewish membership figures are virtually population estimates rather than membership data strictly comparable with the figures for other religious bodies. In most places the Jewish population is too small seriously to modify the ratio of membership to population; but in a city like New York, which has nearly 1,300,000 adult Jews, or two-fifths of the total number in the United States, a correction must be made for this factor. If Jews are eliminated entirely, the estimated membership ratio for New York City becomes 42 per cent.

### *Chapter III*

## TO WHAT DENOMINATIONS DO PEOPLE BELONG?

It has already been shown that approximately 44,380,000 Americans 13 years of age and over are listed on the membership rolls of the churches, and the question of their distribution among the various denominations naturally arises.

### TOTAL NUMBER OF DENOMINATIONS

As used by the Census Bureau, the term denomination refers to the general overhead organization into which local churches are combined. These organizations call themselves by a number of different names such as assembly, convention, council, or church, but for purposes of uniformity all have been classed as denominations. On this basis, there are in the United States 212 separate denominations. Even this large number does not include Buddhist temples, Mohammedan mosques, or other oriental churches. Clearly the constitutional right to worship God according to the dictates of one's own conscience has been liberally exercised.

To contrast the size of these 212 denominations, it is necessary to work out the membership 13 years of age and over for each denomination separately; because only by the use of such adult membership figures is it possible to eliminate the difficulty arising from the fact that certain bodies consider young children as members while other denominations do not.

In the case of the Jewish Congregations, which did not distinguish at all between their members over 13 and those under that age, it was assumed that the proportion under 13 was the same as it was actually reported to be by the Roman Catholic churches. This assumption was made because the new Jewish definition of a member would appear to be at least as inclusive as the Roman Catholic.

The adult membership of each of the 212 denominations is presented in Appendix Table XXIV, showing that most of the

organizations are numerically small. There are 50 that have fewer than 1,000 adult members each, and 48 with from 1,000 to 5,000. Indeed, more than half of all denominations in the United States have fewer than 7,000 adult members each.

Of course, the mere fact that denominations are small does not mean that they are unimportant. The diversity of sects is a basic characteristic of organized religion in the United States. It reflects the individualism and heterogeneous origins of the American people. Anyone who will take the time merely to read over names of the different denominations must be struck by the diverse European background and traditions which many of these names suggest. However, the large number of denominations in America should not conceal the fundamental fact that a handful of organizations embrace the vast majority of all church-members. There are only two dozen denominations with more than 200,000 adult members each, and these twenty-four bodies include 91 per cent. of the country's adult membership.

#### ADULT MEMBERSHIP OF LARGE DENOMINATIONS

The largest single denomination is the Roman Catholic Church, with 13,300,000 American members 13 years of age and over. This means that three out of every ten adult church-members in the United States are Roman Catholics.

These figures emphasize the importance of using adult rather than total membership figures as a basis for making comparisons among denominations. According to the total membership figures reported to the Census Bureau, the Roman Catholic Church accounted for 34.1 per cent. instead of 30 per cent. of the country's church-membership. Thus when membership figures are placed on a comparable basis the relative numerical importance of the Roman Catholic denomination is reduced by nearly one-seventh.

Such a consideration has not only academic but practical interest. During the Great War it was decided to appoint army chaplains on the basis of the relative strength of the different denominations; but a considerable controversy arose regarding the best method of arriving at their relative strength. It would seem that adult membership figures furnish the most reliable basis for this and similar purposes.

The second largest denomination in the United States is the

# ADULT MEMBERS FOR PRINCIPAL DENOMINATIONS

1926

Chart VI

Methodist Episcopal Church with 3,700,000 adult members, or 8.4 per cent. of the national total. It is followed by the Southern Baptist Convention with almost 3,300,000 adult members, or 7.4 per cent. of the entire number.

The Jewish Congregations show 2,930,000 members 13 years of age and over; but this number undoubtedly exaggerates the numerical strength of this denomination because, as has already been pointed out, Jewish membership has recently been defined in such an inclusive fashion that the data collected are virtually population estimates rather than membership figures comparable with those for other religious bodies. Nevertheless no attempt has been made to correct for this factor because reliable information is lacking regarding the relative number of adult Jews that are actively connected with synagogues.

The two other denominations with more than 2,000,000 adult members each are the Negro Baptists and the Methodist Episcopal Church, South; while the Presbyterian Church in the U. S. A., the Protestant Episcopal Church, the Disciples of Christ and the Northern Baptist Convention have from 2,000,000 to 1,000,000. The United Lutheran Church in America and the Congregational Church have roughly 900,000 and 860,000 respectively, and the Evangelical Lutheran Synod of Missouri, Ohio and Other States 700,000. No other denomination has as many as 500,000.

## NEGRO AND WHITE DENOMINATIONS

Some denominations are made up of churches conducted exclusively by and for Negroes; others are solely white, while a certain number include both white and colored congregations.

All together there are twenty-four denominations that are entirely Negro. By far the largest disclosed by the 1926 Census was the Negro Baptist whose 2,914,000 adult members made it the fifth largest denomination in the country. The African Methodist Episcopal Church has 487,000 adult members; the African Methodist Episcopal Zion Church comes next with 397,000, while the Colored Methodist Episcopal Church reports 181,000. These four bodies include 85 per cent. of all the adult Negro church-members in the United States.

The number of denominations with both white and Negro congregations is thirty; but six of these bodies have but one

# URBAN AND RURAL ADULT MEMBERS FOR PRINCIPAL DENOMINATIONS

1926

Chart VII

colored congregation and five have fewer than nine each. The Methodist Episcopal Church has the largest number, with 3,740 colored congregations which have a total of 303,000 adult members. The Presbyterian Church in the U. S. A. and The Disciples of Christ come next, with Negro churches whose memberships 13 years of age and over total 35,400 and 34,700 respectively. The Protestant Episcopal Church, the Churches of Christ, the Congregational Church, and the Roman Catholic Church also have considerable numbers of colored congregations.

#### URBAN AND RURAL DENOMINATIONS

For nearly all denominations the 1926 Census secured the membership of urban and of rural churches separately. Thus it becomes possible to find out which denominations have dominantly urban and which mainly rural memberships.

The data show that the Jewish Congregations and the Church of Christ, Scientist, are the most highly urban of all the large denominations. In both cases more than 94 per cent. of all the adult members belong to city churches; and even a considerable number of the members classed as rural probably live in suburban areas. Protestant Episcopal and Roman Catholic churches are also largely urban, with more than 80 per cent. of the adult members on the rolls of city churches.

Among the large denominations whose memberships are mainly rural are the Methodist Episcopal Church, South, with 64 per cent. of its adult members in rural churches; the Southern Baptist Convention, with 73 per cent.; the Norwegian Lutheran Church of America, and the Churches of Christ, with approximately 76 per cent. each.

These figures indicate that in the United States the rural population is far more dominantly Protestant than is the urban. In country districts 93 per cent. of all churches are Protestant, compared with 80 per cent. in cities.

#### MEMBERSHIP OF DENOMINATIONS BY SEX.

There are interesting differences from denomination to denomination in the relative number of men and of women in the membership. Some organizations seem to appeal to men far more than others do. Although on the average there are five women members for each four men, eighteen denominations

# SEX OF ADULT MEMBERS FOR PRINCIPAL DENOMINATIONS 1926

Chart VIII

reported more male than female members. The extreme case is the Volunteers of America, which actually reported nearly three men to every woman in the membership. In this group also is the large Mormon denomination which is officially known as the Church of Jesus Christ of the Latter-day Saints. In addition, the list includes two of the three old Catholic bodies as well as all of the seven Eastern Orthodox churches. To a certain extent the preponderance of males over females among these bodies may be explained by the fact that the populations from which they draw their members contain more men than women. For example, the last Federal Census found that Utah, which is the center of Mormonism, had 232,000 men and only 217,000 women.

At the other end of the scale are ten small denominations that reported less than half as many male as female members. Among these were the Christian Science Parent Church, the Church of God, Church of God in Christ, and the Shaker organization known as the United Society of Believers. The ratio of males to females for each of the twenty-two largest denominations reporting on this point is given in the accompanying chart.

#### DENOMINATIONS BY FAMILIES

When analyzing the 212 denominations listed by the Census, it should be kept in mind that the Government considers as separate units all bodies that are administratively independent. Thus a number of denominations may be considered as separate units even though their beliefs are much alike. For this reason it is worth while to know the relative numerical importance of the different denominational families. How does the combined membership of the twenty-one Lutheran bodies compare with the total for the nineteen Methodist organizations, and these in turn with the combined membership of the eighteen Baptist denominations. These aggregates are also given in Appendix Table XXIV, and show that the adult membership of all Baptist and all Methodist churches are much alike, being 7,860,000 and 7,237,000 respectively. The Lutheran denominations have 2,827,000 adults, while the nine Presbyterian bodies have 2,582,000. These figures in relation to those for the Roman Catholic, Jewish, Protestant Episcopal and other denominations, both Protestant and non-Protestant, are presented visually in chart IX.

ADULT CHURCH MEMBERSHIP  
BY DENOMINATIONAL FAMILIES  
1926

Chart IX

This chart brings out the extent to which church-membership in the United States is dominantly Protestant. The Roman Catholics, Jews, and other non-Protestants taken together make up only 38 per cent.<sup>1</sup> of the total adult membership of the United States, while the Protestant denominations include 62 per cent.

If anything, the proportion of Protestants shown by this computation is too low because of the very liberal definition of a member employed in 1926 by the Jewish Congregations. Thus it is conservative to conclude that in this country more than three out of five church-members are Protestants. As André Siegfried has pointed out in *America Comes of Age*, the preponderance of Protestantism in the United States has had profound social consequences. Indeed, in the Preface to his latest book, *France, a Study in Nationality*,<sup>2</sup> this astute author goes so far as to say that the principal difference between Anglo-Saxon and Latin civilizations seems to him to be "a contrast between the Catholic and Protestant state of mind, religion leading to extraordinarily different consequences."

#### RELIGIOUS GROUPS BY STATES

The proportion of the adult membership belonging to the chief religious groups varies widely from state to state. In Utah, for example, only 47 church-members in a thousand belong to a Protestant church, while North Carolina is almost solidly Protestant with 993.

The South constitutes the stronghold of Protestantism. There are 11 states, all below the Mason and Dixon line, which report at least nine out of ten members as Protestants. Louisiana, because of its French and Spanish origins, is the only southern state in which Protestants comprise but half the total.

As might have been anticipated, the industrialized East with its large numbers of foreign-born from Southern Europe tends to be dominantly Roman Catholic. In all the New England states, Roman Catholics make up at least half the adult church-members.

<sup>1</sup> Other non-Protestants include the 2 organizations of Latter-day Saints, the 7 Eastern Orthodox churches, the 3 Old Catholic Churches in America, the 2 African Orthodox Churches, the 2 Communistic Societies, the 6 other Catholic bodies, the Church of Armenia in America, the American Ethical Union, the Assyrian Jacobite Apostolic Church, the Baha'is, the 3 Spiritualists, 2 Theosophical Societies, and the Vedanta Society.

<sup>2</sup> Siegfried, *France, a Study in Nationality* (New Haven, Conn.; Yale University Press, 1930).

# DISTRIBUTION OF ADULT MEMBERSHIP FOR CHIEF RELIGIOUS GROUPS BY STATES 1926

*A few non-protestant denominations representing less than .4% of the total adult membership are included with the Protestants*

Chart X

The southwestern states of Arizona and New Mexico with their strong Spanish traditions are also predominantly Catholic. In fact, New Mexico sets the record with more than three-quarters of its adult members on the rolls of Roman Catholic churches.

The Jews are particularly numerous in New York and to a less extent in New Jersey, while the Mormons claim half the members in Idaho and nine-tenths of the total in Utah.

It is worth noting that the proportion of the church-membership that is Roman Catholic is significantly correlated with the percentage of the population that is foreign-born. In the states that have relatively large numbers of foreign-born inhabitants, the proportion of the adult church-membership that is Roman Catholic tends to be high.

The numerical strength of the different religious groups in relation to the total adult population throws light upon a question like the potential voting strength of these groups. There is not a single state in which either Jews or Roman Catholics constitute a majority of the total population, although Rhode Island and New Mexico come close to it with slightly more than 47 out of each 100 adult inhabitants on the rolls of a Roman Catholic church. But there are nine southern states in which the Protestants constitute a majority of the population. Indeed, in North Carolina the adult membership of Protestant churches equals nearly three-quarters of the total population over 13 years of age. The record, however, is held by Utah, where four-fifths of the inhabitants are Mormons.

## *Chapter IV*

### HOW ARE CHURCHES GEOGRAPHICALLY DISTRIBUTED?

The 1926 Census found that there were more than 232,000 local churches in the United States. The magnitude of this figure can be better appreciated when it is remembered that for the same year the United States Bureau of Education reported the number of public-school buildings both elementary and secondary to have been 256,000. In other words, there are about nine churches to every ten public schools.

To answer the question—how are these churches geographically distributed?—a special tabulation was made showing the number of churches in each county not only for all denominations combined but for every one of the 212 individual denominations as well.

#### CHURCHES IN RELATION TO POPULATION

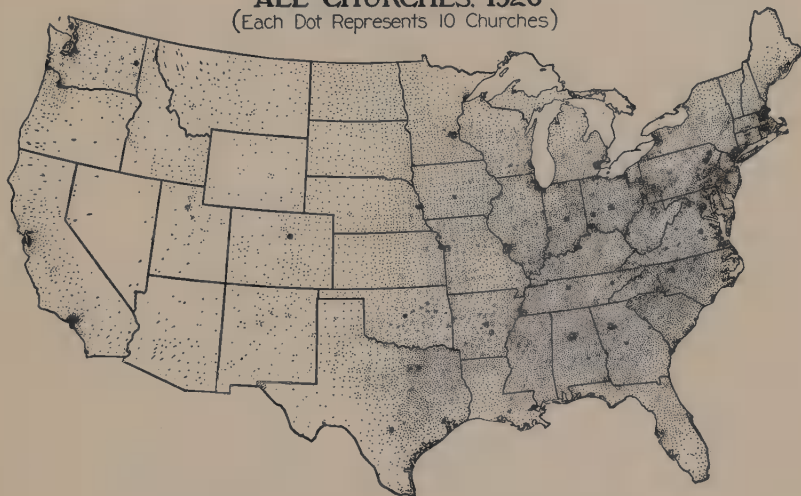

The distribution of all churches in relation to the distribution of population is presented geographically in the map on the next page and shows that in general churches are scattered over the country in much the same way as the population. Nevertheless the broad similarity between these two maps cannot conceal certain marked differences between them.

For the United States as a whole there is a church for every 344 inhabitants over 13 years of age; but this ratio varies locally depending upon such factors as the region and the size of the community involved. Large urban centers have far fewer churches in relation to their population than have smaller places. In cities of 25,000 and over there is slightly more than one church to each 1,000 inhabitants, while in the remaining town and country districts this number is less than 240. This fourfold difference is partly explained by the fact that many churches in open-country areas are being operated to meet the needs of a handful of people.

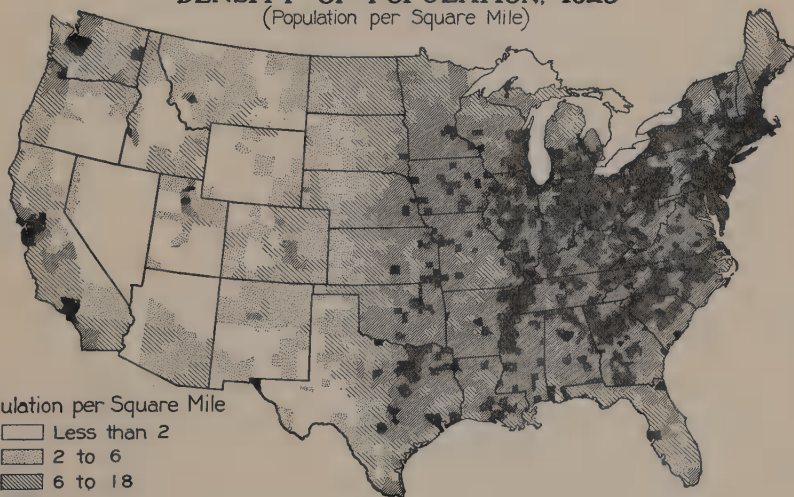

# DISTRIBUTION OF CHURCHES AND POPULATION

- 18 to 45
- 45 to 90
- 90 and over

The number of adult inhabitants to a church also varies from state to state. For places of 25,000 and over the cities in California and New York show the largest numbers with more than 1,300 persons per church. On the other hand, Tennessee, Arkansas, and South and North Carolina report fewer than 500. For town and country areas, the three New England states of Connecticut, Rhode Island and Massachusetts reveal the highest ratios with over 500 adult inhabitants to a church, while Florida, Mississippi and Alabama claim only 140 or fewer. In general, the Southern states in relation to their populations have decidedly more churches than have other sections of the country. In part this tendency is accounted for by the comparatively large rural populations there, and also by the large numbers of colored people that in relation to their numbers tend to establish even more churches than do whites. Among Negroes there is a church for every 178 adults, compared with 340 among the whites.

#### DENOMINATIONAL CONCENTRATION

Most individual denominations, even the large ones, are localized geographically. Relatively few bodies have a national distribution. There are only eight denominations that have at least one church in each state. These bodies are the Seventh Day Adventist, the Church of Christ, Scientist, Jewish Congregations, the Presbyterian Church in the U. S. A., the Salvation Army, the Methodist Episcopal Church, the Protestant Episcopal Church and the Roman Catholic Church. All but the last three of these denominations are very feebly represented in certain states in each of which they have only one or two churches. No state, however, has fewer than 16 Methodist Episcopal, 24 Protestant Episcopal, and 30 Roman Catholic churches.

In all there are 58 denominations each of which has churches in at least half of the states. This leaves 154 bodies, or nearly three-fourths of the total, with churches in not more than half the states, and 70 of these 154 denominations, or a third of the total, are localized in from one to six commonwealths while 18 are found in one state only.

Because most denominations are localized geographically, it happens that there is no state in which the 212 denominations all have churches. Illinois reports the largest number, with 144 denominations having one or more churches there; but thirty-

nine states have, in each case, fewer than 100 bodies represented, while in half the states this number is below 75.

Even these figures hardly tell the full story of the extent of denominational concentration. In most states the majority of churches belong to a handful of denominations. In Illinois, for example, six bodies have a majority of all the churches, despite the fact that this state holds the record with churches representing 144 different denominations. The same situation, usually in an even more accentuated form, prevails elsewhere. In every commonwealth except Illinois, Ohio, Michigan, Colorado, Washington, and California, fewer than six denominations have a majority of the churches.

In twenty states over half the churches belong to three denominations or fewer, while in fourteen states this number is four. In the states listed below the majority of the churches belong to the number of denominations specified above each column.

1	2	3	4	5	6
Utah	Delaware	Maine	Massachusetts	Pennsylvania	Illinois
	Georgia	New Hampshire	New York	Indiana	Ohio
	New Mexico	Vermont	New Jersey	Wisconsin	Michigan
		Rhode Island	Missouri	Minnesota	Colorado
		Connecticut	North Dakota	Iowa	Washington
		Virginia	South Dakota	Nebraska	California
		North Carolina	Maryland	Kansas	
		South Carolina	West Virginia	Oregon	
		Kentucky	Florida		
		Tennessee	Arkansas		
		Alabama	Oklahoma		
		Mississippi	Montana		
		Louisiana	Wyoming		
		Texas	Arizona		
		Idaho			
		Nevada			

The maps on pages 34 to 39 show the actual distribution of churches for each of eleven very large denominations and clearly illustrate the tendency toward geographic concentration. Virtually a quarter of all the churches of the Roman Catholic faith are in New York, Pennsylvania and Illinois, while most southern states have relatively few. Nearly two out of every five Jewish Congregations are in New York, while the same proportion of the churches of the United Lutheran Church of America are found in Pennsylvania. More than one out of every three Congregational churches are in New York and the New England states, while one in four of those of the Presbyterian Church in the U. S. A. are in the Middle Atlantic states. About nine-tenths

of the churches of the Southern Baptist Convention and of the Methodist Episcopal Church, South, are in the southern states.

The Methodist Episcopal denomination has more churches than any other in fifteen states, while the Roman Catholics lead in ten states. The churches of the Negro Baptists hold first place in the southern states of Virginia, South Carolina, Georgia, Florida, Alabama, Mississippi, Arkansas and Louisiana; and those of the Southern Baptist Convention in the six states of Missouri, North Carolina, Kentucky, Tennessee, Oklahoma and Texas. Congregational churches come first in New Hampshire, Vermont and Connecticut, and Mormons in Utah and Idaho. The Norwegian Lutheran Church of America ranks at the top in Minnesota and North Dakota, the Protestant Episcopal Church in Nevada, and the Northern Baptist Convention in Maine.

## DISTRIBUTION OF CHURCHES, 1926

Each Dot Represents a Church

*Chart XVII*

### MEMBERS TO A CHURCH

In considering the number of churches and their distribution it should be kept in mind that certain types of churches have much larger memberships than have others. Churches tend to

# ADULT MEMBERS PER CHURCH IN PLACES OF VARYING SIZE

1926

Chart XVIII

increase in membership with the size of the community in which they are located. In cities of 25,000 and over the average church has almost 600 members 13 years of age and over but in smaller cities this number is just about 275 and in rural areas slightly below 100.

As a rule the churches in New England and the Middle Atlantic states have larger memberships than those in other areas. This tendency is explained in large measure by the number of Jewish and Roman Catholic churches located there. These denominations, particularly in cities, tend to operate churches with larger memberships than the Protestant bodies.

The membership over 13 years of age of Roman Catholic churches averages 239 in rural areas and 1,354 in cities. These figures compare with averages for all churches of 98 and 433 respectively. This means that the usual Roman Catholic Church in rural areas is two and one-half times the average, and in cities more than three times as large.

Jewish Congregations are estimated to have 967 adult members to a city church and 144 per country church, but because of the inclusive definition of a member now employed by this denomination these figures are not strictly comparable with those for Roman Catholics and Protestants. Nevertheless it seems clear that in cities Jewish congregations are likely to be larger than those of the Protestant churches.

As a rule, Mormon churches also have comparatively large memberships, with 401 adult members to a city church and 276 in rural areas. Among the Protestant bodies the city churches having the largest memberships are those of the Southern Baptist Convention and the Methodist Episcopal Church, South, with 481 and 471 members respectively. The liturgical denominations of the Evangelical Synod of North America and the United Lutheran Church of America are the two Protestant bodies that tend to have the largest rural churches. Christian Science churches generally have few members, the urban average being 126 and the rural but 30.

The membership size of churches is important because the number of people belonging to a church sets limits to the kind of program the church can attempt. In certain respects a large church is a more efficient operating unit than a small one. Generally speaking, a handful of members cannot hope to finance

an elaborate church program. In many cases they cannot even pay for the full time of a minister. Moreover, a small church is usually not in a position to embark upon specialized types of service for different age- and sex-groups.

#### DISTRIBUTION OF CHURCHES AND MINISTERS

The 1926 Census of Religious Bodies asked each church to state whether its minister served only that one organization and if not, to tell how many other churches he served. This information, which was tabulated for a number of leading denominations, is here presented for the first time.

The denominations included are those of eighteen white and three Negro denominations,<sup>1</sup> which together embrace 77.4 per cent. of the churches of the United States. The white denominations included in this sample embrace 71.9 per cent. of all the churches of white denominations, while the Negro bodies include 85.8 per cent. of the churches in the twenty-four exclusively colored denominations.

In all, returns were received from virtually 172,000 churches. Of this number approximately half reported that their pastors had charge of only one church. Slightly more than one church in five had pastors who divided their time between two churches, while an eighth of the churches stated that their ministers were serving three organizations. This leaves nearly one church in six with a pastor serving four or more churches. In fact there were actually 4,130 churches out of the 172,000 investigated which reported that their pastors were serving seven or more churches.

Rural churches naturally reported far fewer ministers with but one church each than did city churches. The returns analyzed from more than 42,000 urban churches reveal that 35,400, or 84 per cent., had ministers who served that one church alone,

---

<sup>1</sup> In addition to the Roman Catholic Church the list of white denominations comprises (1) the Northern Baptist Convention; (2) the Southern Baptist Convention; (3) the Free Will Baptists; (4) the Church of the Brethren; (5) the Church of the United Brethren in Christ; (6) the Congregational Churches; (7) the Disciples of Christ; (8) the Evangelical Church (9) the Evangelical Synod of North America; (10) the Evangelical Lutheran Augustana Synod of North America; (11) the United Lutheran Church in America; (12) the Methodist Episcopal Church; (13) the Methodist Episcopal Church, South; (14) the Presbyterian Church in the United States of America; (16) the Protestant Episcopal Church and (17) the Reformed Church in the United States. The three Negro bodies are: (1) the African Methodist Episcopal Church (2) the Colored Methodist Episcopal Church and (3) the Negro Baptists.

and that 4,750, or 11 per cent., served two churches. This means that only 5 per cent. of the city churches had ministers that were in charge of three churches or more.

In all probability, the great majority of urban churches having pastors with more than one church are situated in towns and small cities rather than in great metropolitan centers. This would seem but reasonable, particularly since the facts show that in country districts less than 40 per cent. of the churches had ministers with but one church each while over 20 per cent. reported that their pastors served four or more churches.

In cities, the proportion of churches with a full time minister is almost identically the same both for Negroes and for whites; but the Negro churches in rural districts have a higher ratio than the white churches. Reports from almost 25,000 country churches of the three colored denominations show that half of them were served by pastors with but one charge each, while the 105,000 such churches of the eighteen white bodies reported only about two-fifths in the class with a minister to a church. This difference is explained by several factors. In the first place, relatively more Negro men are available to fill rural pastorates because the colored churches, as will be demonstrated in Chapter VII, do not require from their ministers nearly the same amount of academic training as is the case among white bodies. In the second place, Negroes can afford to accept lower salaries from the church because, as is well known, colored standards of living are lower than for whites. In addition, as the returns of the *1916 Census of Religious Bodies* clearly proved, relatively more Negro than white ministers engage in occupations that supplement the work of the pastorate and in this way augment the low salaries received from the church.

The different denominations vary widely in the proportion of ministers having but one charge each. As a rule, the denominations with powerful overhead organizations have distinctly fewer churches with but one pastor to a church. The explanation is simple. Denominational executives that have the necessary authority tend to combine small churches into circuits. This is especially true in country districts. Only 32 per cent. of all rural Roman Catholic churches are served by priests who give their full time to one church. In this respect the Methodist Episcopal Church and the Methodist Episcopal Church, South,

report 24 and 9 per cent. respectively, while the Protestant Episcopal Church has 31 per cent. All of these bodies are strongly centralized. On the other hand, those denominations like the Congregationalists, the Northern Baptists, and the Disciples of Christ, which allow a high degree of autonomy to their local churches, have comparatively few organizations with ministers that serve two or more churches. Indeed, these three denominations set the record with two-thirds of their rural churches having a minister each.

Data for city churches reveal much the same trends as the rural returns. In cities the Northern Baptist Convention leads the list, having 96 out of each 100 churches with ministers who serve only one church. The Congregational churches come next with 92 per cent. At the other end of the scale are two centralized denominations, the Protestant Episcopal Church with only 65 per cent., and the Evangelical Augustana Lutheran Synod with 53 per cent. of their ministers serving one church. All of the other bodies studied fall between these extremes.

## *Chapter V*

### HOW RAPIDLY ARE CHURCHES GROWING?

The increase in the number of churches and of their members is a particularly important topic. Some persons maintain that in relation to the increase of population churches are growing rapidly, while others hold the reverse to be true.

Since the Government took comparable enumerations in 1906 and 1916 as well as in 1926, reliable information is available to settle the issue.

#### INCREASE AND DECREASE OF DENOMINATIONS

These data show that in 1906 there were, exclusive of Buddhist temples and Mohammedan mosques, 186 separate denominations; but by 1916 the number had grown to 200, and at present there are 212. In other words, the net increase during the earlier ten-year period was 14, and during the last decade, 12.

Even these figures exaggerate the growth in the number of denominations, because each succeeding census found several tiny denominations that the preceding census failed to enumerate. In addition, one denomination was listed in the last census as new merely because in 1926, for the first time, the Census Bureau considered "Federated Churches" to be a separate denominational category, while in earlier censuses they had been classed with the Independent Churches. Thus it becomes obvious that in reality there has been no very great increase in the number of denominations since 1906. Indeed, there has been a tendency, which has become especially noticeable during the last decade, for denominations to combine. During the last ten-year period, eighteen church bodies were involved in mergers. The Welsh Calvinistic Church combined with the Presbyterian Church in the U. S. A.; three Lutheran bodies merged to form the United Lutheran Church; and three other Lutheran groups got together to make the Norwegian Lutheran Church of America. The Hungarian Reformed Church united with the

Reformed Church in the U. S., while the Church of the Living God and the Church of the Living God, General Assembly, became the Church of God, "Pillar and Ground of Truth." The Evangelical Church was formed from the Union of the Evangelical Association and the United Evangelical Church, the Free Baptists combined with the Northern Baptist Convention and the Evangelical Protestant Church of North America united with the Congregational churches.

On the other hand, only one denomination during the period split into two—the American Baptist Association broke off from the Southern Baptist Convention.

#### INCREASE AND DECREASE IN NUMBER OF CHURCHES

From 1906 to 1926 the number of churches increased 9.4 per cent.<sup>1</sup> During the same period the adult population of the nation as a whole rose from 57,350,000 to 80,000,000, or nearly 40 per cent. Thus it is obvious that the increase in the number of churches has been about one-fourth as rapid as the increase in population.

The fact that since 1906 churches have been increasing less rapidly than the population does not necessarily imply a decline in the strength of the church. Rather it reflects a tendency toward the consolidation of churches arising in part from population trends and in part from considered policy. The recent migration from the farms to cities has meant the redistribution of religious population into fewer churches with larger memberships. Moreover, the increasing coöperation among churches has helped to bring about the voluntary elimination of overlapping churches. Therefore it is not strange that since 1906, and particularly since 1916, the number of churches has not kept pace with the increase in population. Between 1906 and 1916 the number of churches grew 7.6 per cent. and the adult population 19, while during the decade from 1916 to 1926 the churches increased only 1.7 per cent., while the population is estimated to have grown 17.

Although the increase in the number of churches has been slow when compared with the growth in population, it has been

---

<sup>1</sup> These figures are taken from a table in the 1926 Religious Census and have been adjusted to exclude Jews.

quite rapid when contrasted with the increase in the number of public elementary and secondary schools. In 1926 there were actually 1,600 fewer public-school buildings in use than in 1906 and about 25,000 fewer than in 1916. Apparently such factors as the coming of the automobile, and the rapid growth of cities have produced in both churches and schools a tendency toward consolidation. Thus it is not strange to find that whereas in 1906 there was a church to every 270 inhabitants over 13 years of age; in 1916 there was one to every 300 persons of this age; and in 1926 one to every 344.

The tendency toward consolidation has recently affected the churches in town and country areas more than it has those in large cities. Between 1906 and 1916 the adult population per church in cities of 25,000 and over grew from 962 to 1,011; but after that the ratio remained stationary, being 1,009 in 1926. On the other hand, the adult population per church in places outside these large cities has continued steadily to increase; in 1906 there were 206 adults to a church; by 1916 the number had reached 217 and now is 239. Recent social changes are tending to reduce the number of crossroad churches just as they are reducing the number of one-room rural schoolhouses.

Although the number of churches in this country has been increasing, ten New England and mid-western states have each experienced a net decline since 1906.<sup>2</sup> Iowa has 1,100, or 18 per cent., fewer churches today than it had twenty years ago. Vermont reported a decrease of 16 per cent., Missouri of 14 and Nebraska and Kansas of 9 each. Maine, New Hampshire, Ohio and Indiana are the other states showing net decreases. In all of these states except Vermont the total population has been increasing.

The most rapid percentage increase in the number of churches has taken place in the Mountain states, particularly in Montana and Arizona, in each of which the net increase in churches has been more than 140 per cent. during the twenty-year period. These unusual increases are largely explained by the rapid growth of population in these states.

---

<sup>2</sup>In the computations for all states, the Jewish congregations have been excluded because reliable information about the number of Jewish churches in 1906 and 1916 is lacking.

## INCREASE AND DECREASE IN NUMBER OF CHURCHES BY DENOMINATIONS

The Roman Catholic Church is one of the few very large denominations that showed a rapid increase in the number of churches, from 12,472 in 1906 to 18,940 in 1926. Most of this growth, however, occurred during the earlier decade, the net increase for that period being 4,903 compared with 1,565 during the last ten years.

Among the larger denominations the Church of Christ, Scientist, reported the most rapid expansion, from 635 churches in 1906 to 1,913 churches in 1926, or a 200 per cent. growth in twenty years. The Churches of Christ reported a very large increase as did also the large Mormon body known officially as the Church of Jesus Christ of Latter-day Saints. As will be shown later, these are the denominations that have been increasing most rapidly in members.

Although the total number of churches has been slowly increasing, certain leading denominations show a decline. The number of Methodist Episcopal churches dropped from 29,742 in 1906 to 26,130 in 1926, or a decline of 12 per cent. Other denominations whose churches have been declining in number, include the Northern Baptist Convention, the Congregational Churches, the Disciples of Christ, the Reformed Church in the United States, and the Church of the United Brethren in Christ.

For a number of denominations the figures for 1906 and 1916 have had to be adjusted to make them comparable with the 1926 returns. For example, the slight decrease in the reported number of churches of the Southern Baptist Convention from 23,580 in 1916 to 23,374 in 1926 is explained by the fact that the American Baptist Association, with 1,431 reporting churches in 1926, separated from the Southern Baptist Convention after 1916. When these churches are added to those of the Southern Baptist Convention for 1926, an increase of 5.2 per cent. appears. This change and similar ones have been taken into account in the computation of the growth and decline of churches since 1906 for each of the leading denominations separately.

It may seem strange that this information, which is presented in the Appendix Tables, fails to include data for the Jewish Congregations; but the reason is that this denomination was

incompletely enumerated at the earlier census years. The available returns show an increase from 1,152 churches in 1906 to 1,619 in 1916 and then to 3,118; but these figures, as the Census Bureau itself points out, exaggerate the growth during the period. For this reason, Jewish Congregations have been entirely omitted in the computation of the growth and decline of churches by denominations.

#### GROWTH IN ADULT MEMBERSHIPS

More significant than the changes in the number of churches are the fluctuations in their adult memberships. The returns of the Government make it possible to compute for each census year the membership 13 years of age and over both for all churches combined and for each denomination separately. These data show that the adult membership, which totaled 31,868,000 in 1906, increased to 37,785,000 by 1916 and then to 44,380,000 in 1926. This means that during the earlier decade the number of church-members increased 18.6 per cent. and during the last ten years 17.3 per cent. For the same periods the estimated growth of the adult population of the United States has been 19.0 and 17.2 per cent. respectively. Thus it becomes clear that since 1906 the increases in the membership figures reported by the churches have kept pace almost exactly with the growth of population.

The reason why certain people have jumped to the conclusion that church-membership has been increasing in America much more rapidly than the population is that a number of denominations, notably the Jewish Congregations, the Christian Reformed Church, the Protestant Episcopal Church, and the twenty-one Lutheran bodies, have recently adopted more inclusive definitions of "a member." Naturally, if no adjustment is made in the total membership figures reported by these denominations, one will inevitably overestimate their rate of growth. The figures here used, however, have been carefully corrected to allow for these changes in definition.

#### SEX AND RACE DIFFERENCES

The proportionate number of all women on the rolls of the church would appear to be much the same today as a generation ago. In 1906 the percentage of adult women in church was 64.3,

compared with 62.9 in 1926. For men the proportion was 47.1 per cent. in 1906 and 48.2 in 1926.

The relative number of Negroes in church has increased appreciably since 1906, while the proportions for the whites have changed but little. In 1906 only 39.1 per cent. of all Negro men were on the rolls of a church compared with 45.5 per cent. now; for Negro women these proportions are 64.4 and 73.1 respectively. It is worth noting that most of these increases occurred during the earlier decade.

Among white women, the relative numbers in church declined slightly from 64.3 per cent. in 1906 to 61.8 per cent. in 1926, while for the white men these proportions are virtually the same at both periods, being 48.2 in 1906 and 48.5 in 1926.

### GEOGRAPHIC CHANGES

The relative number of city inhabitants belonging to church has been declining while the proportion of town and country dwellers in church has tended somewhat to increase. The Census figures show that for cities of 25,000 and over the percentage of the population on church rolls was 66 in 1906, 61 in 1916 and 59 today. In places outside of these principal cities this proportion has risen from 51 in 1906 to 53 per cent. in 1926. The fact that the churches have been steadily losing ground in our great metropolitan centers is of special significance in view of the rapid growth of cities.

Although adult memberships for the country as a whole have increased at almost exactly the same rate as the total adult population, nevertheless certain states show marked differences between their membership and their population growth. In Maine, for example, the adult membership since 1906 has increased 22 per cent. and the adult population but 8. In Kansas, church-membership has increased 52 per cent., while the population has grown 16.5, or only one-third as fast. Mississippi and Tennessee, in the "Scopes trial" region, and Utah with its predominantly Mormon population, are the other three states whose reported church-memberships have increased twice as fast as the population. At the other extreme are Wisconsin, whose church-members have increased in number only half as rapidly as the population; and Montana where the number has grown but 28 per cent. since 1906, while its population was doubling. In the

# ADULT POPULATION IN CHURCH 1926, 1916 AND 1906

forty-one other states and in the District of Columbia, the changes in membership in relation to the population have been less extreme. The actual rates of change are presented in detail in Appendix Table II.

#### CHANGES IN ADULT MEMBERSHIPS BY DENOMINATIONS

Differences in the rate of growth of individual denominations are quite as striking as the fluctuations from state to state. Four of the large denominations more than doubled their memberships during the past twenty years. These bodies are the Church of Christ, Scientist, the African Methodist Episcopal Church, the Churches of Christ and the Church of Jesus Christ of Latter-day Saints. The rapid growth of such non-traditional sects as the Mormons and the Christian Scientists would seem to demonstrate fundamental changes in the religious thinking of large groups of Americans.

Although none of the big denominations shows a net loss in membership since 1906, several of them have grown quite slowly. The African Methodist Episcopal Church and the Evangelical Synod of North America each increased during the period less than 8 per cent. and the Norwegian Lutheran Church only 5 per cent.

In certain respects the growth trends during the last decade have been quite different from those of the earlier ten-year period. For such large denominations as the Negro Baptists, the Disciples of Christ, the Evangelical Synod of North America, the Methodist Episcopal Church, the African Methodist Episcopal and the Reformed Church in the United States, the rate of membership increase between 1906 and 1916 was more than three times as rapid as during the last decade. Indeed, the only big church bodies that are known to have increased their adult memberships more rapidly during the last than during the earlier ten-year period are the Norwegian Lutheran Church of America, the African Methodist Episcopal Church, the Protestant Episcopal Church, and the Roman Catholic Church.<sup>3</sup>

#### INCREASE IN MEMBERS PER CHURCH

On the average, the local churches of the country have been steadily growing in membership. In 1906 there were only 150

<sup>3</sup> Unfortunately the necessary data are not available to permit of comparison by decades of the growth either of the Jewish Congregations or the Church of Christ, Scientist.

# INCREASE IN NUMBER OF ADULT MEMBERS FOR PRINCIPAL DENOMINATIONS 1906 — 1926

members to a church; by 1916 this figure was 166; and now it is 191—an increase of 27 per cent. in twenty years. These figures vary with the size of the center involved. The churches in town and country areas have grown from 105 adults per church in 1906 to 127 at the present time. Similar figures for cities that have from 25,000 to 50,000 inhabitants show an average increase from 373 to 438, while data for places above 50,000 but below 100,000 show that the average has remained virtually stationary, being 461 and 465 respectively. In large cities, however, there has been a tendency for average memberships to decrease. During the last twenty years the number of adults to a church in cities having 100,000 to 300,000 inhabitants dropped from 565 to 517, while in great metropolitan centers this decline was from 940 to 787. Thus the net result of the changes since 1906 in the number of churches and their members has been for churches in large cities to decrease in membership and for those in smaller cities and in rural areas to increase.

## *Chapter VI*

### IS THE SUNDAY SCHOOL DECLINING?

The 1926 Census returns raise fundamental questions about the future of education in this country. Church-school statistics are not all that could be desired; nevertheless the Government's data are believed to be sufficiently reliable to afford a basis for drawing important conclusions.

#### NUMBER OF CHURCHES WITH SUNDAY SCHOOLS

Denominational schools were reported by almost 185,000 churches, or nearly four-fifths of the total number. This figure necessarily excludes undenominational or union Sunday schools because they were not enumerated in 1926. Most undenominational and union schools are in communities removed from the reach of organized church work and in 1916 constituted only 6 per cent. of all schools and 3 per cent. of the scholars.

With one exception the Government's figures exclude data about daily vacation Bible schools, week-day religious education, and parochial schools. Questions were asked about these types of schools, but the replies were not tabulated except for Roman Catholic parochial schools.

Only sixteen small denominations reported having no Sunday schools at all. In this group are such non-traditional denominations as the Theosophical Societies, three Mennonite bodies, the Baha'is and the Assyrian Jacobite Apostolic Church.

The great majority of Sunday schools are found in rural areas. This is but natural since the great majority of churches are located there. Seventy-two per cent. of all churches and of the churches reporting Sunday schools were classified by the Government as rural.

With four exceptions all of the larger denominations reported that at least four-fifths of their churches had schools; but the Roman Catholic Church had Sunday schools reported by only

44 per cent. of its churches and the Jewish Congregations by only 17 per cent.

The comparatively low percentage of Roman Catholic churches reporting Sunday schools is accounted for by the large number of parochial schools conducted by this denomination. Returns secured in connection with the 1926 Census show that 5,422 Roman Catholic churches reported parochial schools with 1,800,000 scholars. These schools, although conducted during the week, give religious as well as secular instruction.

To a less extent, the same situation prevails among certain Lutheran bodies, while Jewish congregations operate what are known as Talmud Torah schools. Thus the proportion of churches reporting Sunday schools can be used only in a general way as a measure of religious instruction.

Sunday schools are more numerous today than a generation ago. Between 1906 and 1926 the number of churches with schools increased from 168,000 to 185,000, or 10.2 per cent. It will be recalled that during the same period the number of churches grew 9.4 per cent.

Over the last decade the proportion of churches operating schools has tended slightly to decrease. In this period churches with schools declined 0.8 per cent., while the total number of churches increased 1.7.

#### PUPILS IN CHURCH SCHOOLS

According to the 1926 returns the total number of scholars in denominational church schools was slightly in excess of 21,000,000. This figure compares with a public-school enrollment for the same year of 24,740,000. In other words, the number of pupils on the rolls of church schools is only 15 per cent. less than the number on the rolls of public schools, both elementary and secondary.

During the twenty-year period following 1906, the number of reported scholars in Sunday schools increased from 14,686,000 to 21,000,000, or approximately 45 per cent. Figures supplied by the Bureau of Education show that during this same period the enrollment in the nation's public schools increased from 16,640,000 to 24,740,000, or at almost exactly the same rate.

The increase in the number of pupils in church schools was decidedly less rapid between 1916 and 1926 than during the

previous decade. Between 1906 and 1916 the scholars in these schools grew from 14,686,000 to 19,936,000, or 35.7 per cent.; but in the last ten-year period the net increase was only about 1,100,000, or 5.5 per cent. This decline is partly explained by the sharp decrease in the reported enrollment of Roman Catholic schools which rose from 1,480,000 in 1906 to 1,860,000 in 1916 but then dropped to 1,200,000 in 1926. This surprising loss of nearly 660,000 pupils in ten years is probably explained in part by a difference in the method of reporting. Since no inquiry was made either in 1906 or 1916 regarding the number and enrollment of parochial schools, it is probable that certain Roman Catholic churches included some parochial school figures under the heading of church-school figures, thus swelling the 1906 and 1916 returns in comparison with those of the 1926 Census which secured separate totals for each type of school. However, this factor alone can hardly account for a decline in Roman Catholic Sunday-school scholars of more than a third in ten years. The fact seems to be that this body has experienced a decline in Sunday-school scholars alone with a definite increase in the enrollment of parochial schools. Figures from the *Official Catholic Directory* show that from 1906 to 1926 the enrollment of Roman Catholic parochial schools increased by approximately 1,000,000, or virtually doubled. This is twice the rate of increase in the enrollment of public elementary and secondary schools.

The Roman Catholic Church has come to the conclusion that religious instruction given every day as a regular part of the parochial-school curriculum is worth far more than a once-a-week Sunday-school lesson.<sup>1</sup> Certainly it is noteworthy that Roman Catholic parochial-school enrollments have been growing so much faster than those of public schools.

---

<sup>1</sup> The recent encyclical letter of Pope Pius XI dealing with education unequivocally states the Roman Catholic position. In part it says:

"For the mere fact that a school gives some religious instruction (often extremely stinted), does not bring it into accord with the rights of the Church and of the Christian family, or make it a fit place for Catholic students. To be this, it is necessary that all the teaching and the whole organization of the school, and its teachers, syllabus and text-books in every branch, be regulated by the Christian spirit, under the direction and maternal supervision of the Church; so that Religion may be in very truth the foundation and crown of the youth's entire training; and this in every grade of school, not only the elementary, but the intermediate and the higher institutions of learning as well. To use the words of Leo XIII: 'It is necessary not only that religious instruction be given to the young at certain fixed times, but also that every other subject taught, be permeated with Christian piety.'"

*Current History*, March, 1930, p. 1101.

## RATIO OF CHURCH-SCHOOL ENROLLMENT TO POPULATION

To arrive at a crude measure of the relative strength of church schools, it was decided to find out how the enrollment of Sunday schools bulked in relation to the total population under 19 years of age. The data reveal that for the country as a whole these enrollments are equivalent to less than half—44 per cent. to be exact—of the youth of the United States. Even making allowance for the fact that this computation fails to take the scholars of undenominational Sunday schools into account, or those in Talmud Torah and in parochial schools who do not attend Sunday schools; nevertheless it seems unlikely that the number of pupils enrolled in schools that put major emphasis upon religious instruction is equal to more than 50 per cent. of the youth population. This statement is believed to be conservative, especially when it is borne in mind that a large number of Sunday-school scholars, particularly in southern communities, are adults who would have been eliminated from this computation if the detailed information about them had been available. In this connection it is interesting to note that Dr. H. Paul Douglass in his study of *1,000 City Churches* found that 26 per cent. of the pupils in Sunday schools were over 21 years of age and 10 per cent. were under six.

The proportion of young people attending church schools is greater today than in 1906, but less than in 1916. A generation ago the pupils in Sunday schools were equivalent to 40 per cent. of the population under 19 years of age; by 1916 this ratio had reached 48 per cent.; recently it has decreased to 44 per cent.

## CHANGES BY DENOMINATIONS SINCE 1906

The denominations that have experienced the most rapid increase in the number of Sunday-school scholars are naturally those bodies that have increased most rapidly in church-membership. The Christian Science churches easily hold the record, with a reported increase of 772 per cent.—from 16,000 pupils in 1906 to 141,000 now. The Churches of Christ comes second with an increase of nearly fourfold; but in this connection it should be mentioned that since this denomination has probably been more accurately enumerated at each succeeding Census, the increase in the number of scholars may be partly a matter of classi-

# RATIO OF PUPILS IN SUNDAY SCHOOL, TO CHILD POPULATION UNDER 19 YEARS BY STATES, 1926

Chart XXI

fication. The local organizations of the Christian Church, the Disciples of Christ, and the Churches of Christ all frequently call themselves by the same name, such as "Christian Church" or "Church of Christ"; and therefore it was sometimes difficult, especially at earlier Census periods, to classify these denominations accurately.

The African Methodist Episcopal Zion Church, the Southern Baptist Convention, and the Evangelical Lutheran Synod of Missouri, Ohio and Other States are the other three large denominations whose church-school enrollments have more than doubled since 1906.

#### SCHOLARS TO A CHURCH

At present the average number of scholars to a church is 114; but urban organizations naturally have Sunday schools with larger memberships than those of rural churches, the difference being 210 in cities contrasted with 76 in country districts. As a rule, the urban Sunday schools of the leading southern denominations—the Southern Baptist Convention and the Methodist Episcopal Church, South—have larger memberships than those of other big bodies. The unusually large memberships of these southern Sunday schools are in part accounted for by their inclusion of unusually large numbers of adults. At the other extreme are the rural Sunday schools of the Christian Science churches whose memberships average only 24 scholars to a church.

The number of scholars per church has been steadily rising. Twenty years ago there were only 88 pupils to a church; by 1916 this number was 107; and it is now 114, a growth of 30 per cent. in two decades.

#### OFFICERS AND TEACHERS

The total number of Sunday-school officers and teachers reported by the churches is 2,168,000, or more than one to every ten pupils. This ratio compares with one to every thirty scholars in our public-school system. Since modern educators are coming more and more to recognize the desirability of teaching children in small groups, the comparatively large numbers of officers and teachers might seem to give the Sunday schools a decided advantage over the public schools; but in this connection it should be remembered that the vast majority of all Sunday-school teachers

are unpaid and that many of them are not specially trained. However, it is impressive that more than 2,000,000 people are willing to contribute their services to help conduct Sunday schools.

The usual city church has nineteen officers and teachers, and the rural church nine. Few large denominations show pronounced variations from this average.

The majority of Sunday-school officers and teachers are found in rural schools, the actual numbers being 1,180,000 in the country and 987,000 in cities. There is an officer or teacher for every nine rural pupils, compared with one for every eleven scholars in cities.

The growth since 1906 in the number of officers and teachers has not kept pace with the increase in Sunday-school scholars. Twenty years ago there were almost 1,650,000 officers and teachers, contrasted with 2,168,000 now. This represents an increase of 31 per cent. During the same interval the number of pupils grew 43 per cent., which means that the number of pupils to a teacher has been rising. In 1906 there was one officer or teacher to every nine scholars, compared with one to ten today.

## Chapter VII

### TO WHAT EXTENT ARE MINISTERS ACADEMICALLY TRAINED?

The training of ministers is a matter of ever-increasing concern to churchmen and laymen alike; nevertheless there has been little reliable information on the subject. The purpose of this discussion is to present important facts about ministerial training obtained by the *1926 Census of Religious Bodies* but not published.

The Government, when taking this Census, asked each minister to state whether or not he was a graduate of a college or of a seminary or of both, and if so, to name any institution of this character of which he was a graduate. It then tabulated all the returns for each of the leading denominations. In the belief that this material provides a better index of the educational qualifications of the ministers of the country for their tasks than any other heretofore available, the Institute analyzed the Census tabulations covering twenty-one denominations that have 74 per cent. of the entire number of churches in the United States. From these figures it has become possible to show the proportions of college and seminary graduates, not only for the country as a whole but for different geographical divisions and for different denominations.

The ministers chosen for study are those of the seventeen white Protestant, the Roman Catholic, and three Negro denominations employed in Chapter IV in the study of the distribution of churches and their ministers. Approximately 11,750 Roman Catholic priests are included, about 71,500 clergymen of seventeen white Protestant denominations, and 21,600 ministers of the three largest colored bodies.

#### NATIONAL AVERAGES

Analysis of the Census data shows that nearly three out of every eight ministers in the eighteen white denominations and

more than three out of four of those in the three Negro bodies do not claim to be graduates of either college or seminary. And even these figures are conservative, because the Government, throughout its tabulating process, gave ministers the benefit of the doubt when it came to classifying certain cases.

A very liberal interpretation was placed upon the terms "college" and "seminary." Any institution listed by a minister as an institution of higher learning was considered to be one unless the name clearly indicated on its face that it was not of college or seminary rank. Indeed, if a minister simply stated that he was a graduate of a college or of a seminary, he was placed among the graduates though he failed to state the name of the institution. Moreover, it was assumed, unless there was direct evidence to the contrary, that each minister was a graduate of the institutions that he listed, although it was recognized that some ministers filled in the names of institutions they had attended but from which they had not been graduated. Thus the findings presented in this section are apt to overestimate rather than to underestimate the actual number of ministers that are graduates of colleges or seminaries.

This conclusion is confirmed by comparing the results of the 1926 Census with those of a special denominational inquiry recently made into the educational status of Methodist Episcopal ministers. The Government returns, as interpreted by the Census Bureau, indicate that 24 per cent. of all Methodist Episcopal ministers are graduates of both college and seminary, while the study by the denomination itself shows that only 20 per cent. of the 11,275 ministers investigated have "reached the full standard of college and seminary training."<sup>1</sup> Thus it is probable that in reality *more* than three-eighths of the ministers included among the eighteen white denominations, and *more* than three-quarters of those in the three Negro bodies, were not graduated from any college or seminary.

This statement becomes the more surprising when attention is drawn to the fact that among the ministers intensively studied are all those of several large denominations that have the highest educational standards. The 105,000 ministers analyzed include nearly 11,750 Catholic priests as well as nearly 4,000 ministers

<sup>1</sup> Bennett, *The Ministry of the Methodist Episcopal Church* (Chicago; Methodist Episcopal Church Commission on Life Service), p. 9.

of the United Lutheran Church in America, the Evangelical Lutheran Augustana Synod of North America, and the Reformed Church in the United States. Since these bodies are known to have as few non-graduate pastors as any major denominations in the country, it follows that the showing made by the group of white ministers under investigation is undoubtedly better than average, and consequently that if figures for all the ministers in the United States had been available they would doubtless have shown even higher proportions of untrained men than those found for the sample.

Certain it is that the ratio of three out of eight underestimates the proportion of white *Protestant* ministers that were not graduates of either college or seminary. This can be demonstrated by computing separate totals for the ministers of the seventeen white Protestant bodies. Such figures show that out of approximately 71,500 ministers in the group almost 29,500 did not claim to be either college or seminary graduates. In other words, 41 per cent. did not allege that they were graduates of either type of institution, while only 33 per cent. stated that they were graduates of both college and seminary.

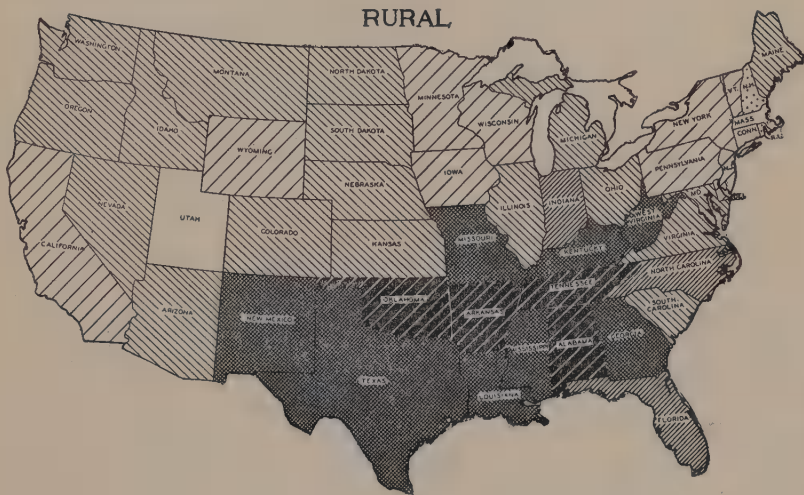

The Roman Catholic Church has a far lower proportion, and the three Negro denominations a far higher proportion, of untrained men than have the seventeen white Protestant bodies. Instead of 41 per cent. falling into the group of non-graduates, only 6.6 per cent. of the Roman Catholic priests were so classified. On the other hand, 68 per cent. of the priests claimed to be graduates of both college and seminary, compared with less than half this proportion for the white Protestant pastors.

Among the three Negro denominations, 78 per cent. reported themselves as not graduates of either college or seminary, while only 7.4 per cent. claimed to be graduates of both.

#### URBAN-RURAL DIFFERENCES

The proportion of untrained ministers varies decidedly from region to region and from denomination to denomination. Among Protestant bodies, rural-urban differences are especially striking. Of the 25,000 city ministers among the seventeen white Protestant bodies, only 20 per cent. reported that they were not graduates of either college or seminary, while more than half—52 per cent.—claimed to be graduates of both. In rural

Chart XXII

areas, however, these proportions are virtually reversed. Returns from 46,000 Protestant country pastors show that only 23 per cent. were graduates of both college and seminary, and that more than half—53 per cent.—were not graduates of either.

For the three Negro bodies, the returns show that 62 per cent. of the urban, and 83 per cent. of the rural, ministers were non-graduates. In so far, therefore, as academic training is a valuable preparation for the work of the ministry, the Protestant rural church is laboring under a decided handicap when compared with the urban church. This conclusion, however, does not hold for the Roman Catholic Church. Returns from more than 5,000 rural priests show that only 7.4 per cent. reported themselves as non-graduates, compared with 6.0 per cent. for city priests.

In this connection it should be pointed out that the Roman Catholic Church has relatively fewer rural ministers than most other denominations have. Only 45 per cent. of all Catholic priests were classed as rural, compared with 65 per cent. among the seventeen white Protestant denominations, and 74 per cent. among the three Negro bodies.

Similar figures for doctors furnish interesting comparisons. Data for 1923,<sup>2</sup> published by the General Education Board show that of 135,000 doctors distributed among all sections of the United States except New England, 30 per cent. were rural and 70 per cent. urban. Figures for the 105,000 ministers included in this study show that 64 per cent. were rural and only 36 urban. Compared with physicians, therefore, the number of rural clergymen is relatively large.

#### VARIATIONS BY DIVISIONS

The wide differences in the rural and urban status of Protestant ministers make it necessary to compare city and country areas separately to discover variations from division to division in the relative number of trained men. Obviously, it would be unfair to contrast the proportion of well-trained Protestant ministers in a state so highly urban as New York with the figure for a state like Alabama, which is dominantly rural.

If then the comparison is limited to urban centers, the returns

---

<sup>2</sup> Mayers and Harrison, *The Distribution of Physicians in the United States* (New York; General Education Board, 1924), p. 166.

from the seventeen white Protestant denominations show that the cities of the New England and Middle Atlantic states have, in general, the lowest proportions of ministers that are neither college nor seminary graduates, while those in the southwest have the highest ratios.

Excluding those states that have fewer than 100 city ministers, the three commonwealths making the best urban records are New York, Connecticut and Massachusetts. Of the New York Protestant ministers analyzed, a smaller proportion than one in eight falls into the non-graduate group; while in both Connecticut and Massachusetts the ratio was but slightly above one in ten. Indeed, more than seven out of every ten white Protestant ministers in the cities of Connecticut claimed to be graduates of both college and seminary.

On the other hand, there are half a dozen states—Alabama, Arkansas, Georgia, Texas, Tennessee, Oklahoma—in which more than a third of the urban pastors of the seventeen white Protestant denominations did not claim to be graduates of either college or seminary. Oklahoma, which makes the poorest showing, reports that out of each hundred Protestant ministers of the seventeen denominations, 37 were not graduates of either college or seminary, and only 33 were graduates of both.

#### CITY FIGURES

The proportion of urban Protestant ministers that are well-trained varies not only from region to region, but with the size of the center concerned. As a rule, great metropolitan areas have appreciably larger proportions of clergymen that are graduates of college or seminary than do cities of smaller size. This generalization is based upon a comparison of averages for fifteen very large cities with those for all urban places outside these cities. The fifteen metropolitan centers chosen for individual study have a combined population that in 1926 was estimated to be over 19,500,000.<sup>3</sup>

Data for these great cities show that for the seventeen white Protestant denominations only 14 per cent. of the ministers rated themselves as non-graduates, compared with 21 per cent. for all

---

<sup>3</sup> Specifically the places included are: Boston, New York, Buffalo, Philadelphia, Pittsburgh, Cleveland, Detroit, Chicago, Milwaukee, Washington, D. C., Atlanta, New Orleans, St. Louis, San Francisco and Los Angeles.

other cities. On the other hand, 60 per cent. of ministers in large cities were graduates of both college and seminary, contrasted with but 53 per cent. in smaller cities.

The great population centers showed interesting differences among themselves. Omitting Milwaukee, New Orleans and San Francisco, because each of these places had fewer than 100 ministers of the seventeen white Protestant denominations, returns for the dozen remaining cities give Boston the best showing, with fewer than a twentieth of its Protestant clergymen in the non-graduate class; New York ranks second with under a tenth; while Philadelphia, Washington and Chicago were virtually tied for third place, with about one-eighth. Buffalo and Cleveland have about a seventh in the non-graduate group and Pittsburgh, Detroit, St. Louis and Los Angeles under a fifth. Atlanta made the poorest showing, with three-eighths of its ministers in the class with least training. The figure for each of these large cities is, in nearly every case, above the urban average for the state in which it is located.

#### RURAL RETURNS BY STATES

In general the states that have the best-trained urban ministers also have the best-trained rural pastors. So far as the seventeen white Protestant denominations are concerned, Connecticut and Massachusetts, together with Utah, have the smallest relative numbers of clergymen that are non-graduates, while Tennessee, Alabama and Arkansas have the largest proportions.

Rural conditions in a number of states are startling. There are eleven southern commonwealths in which more than three out of five country Protestant pastors of the seventeen denominations do not claim to be graduates of any institutions of higher learning. In two cases these ratios actually exceed three out of four. Figures for 1,798 rural ministers in Alabama show that 1,362 classed themselves as non-graduates and only 167 as having the full training of both college and seminary. In Arkansas, 738 out of 967 fell into the group having least training, while only 80 are in the highest group. It should be borne in mind that these figures refer almost exclusively to white ministers since only 4 per cent. of the churches of the seventeen denominations are colored.

# TRAINING OF MINISTERS IN 12 LARGE CITIES FOR 17 WHITE PROTESTANT DENOMINATIONS

1926

Chart XXIII

Moreover, these few Negro churches are not concentrated in one division but are scattered among many different states. For all practical purposes, therefore, the figures just given represent conditions among white Protestant ministers only.

#### NEGRO FINDINGS

Data for the three exclusively Negro denominations make it clear that geographic differences in the training of colored clergymen show, in general, the same tendencies as those found for white ministers. Among colored as among white ministers the Old Colonial area has the highest and the Southwest the lowest proportion of untrained men. Out of 650 Negro pastors in cities of the Middle Atlantic states, slightly more than half are not graduates of either college or seminary, while in the rural areas of the same states nearly two-thirds are non-graduates. But in the West South Central division, comprising the four states of Arkansas, Louisiana, Oklahoma and Texas, the proportions of non-graduates are much higher. In that area three-quarters of the urban and nearly nine-tenths of the rural Negro ministers did not class themselves as either college or seminary graduates. In Oklahoma, for example, out of 337 Negro ministers studied only 30 said they were graduates of either a college or a seminary, and of this number only 9 claimed to be graduates of both. In Louisiana only 86 colored pastors out of 922 investigated stated that they were graduates of any institution of higher learning and only 17 said they were graduates of both college and seminary.

The Negro ministry also shows a tendency for the better trained men to be concentrated in great cities. Returns for the fifteen metropolitan areas reveal that out of more than 750 Protestant clergymen of the three Negro denominations, 20 in each hundred are graduates of both college and seminary, while 55 are non-graduates. For the other cities of the United States comparable colored figures are 15 and 63 respectively. Clearly the proportion of ministers that are academically well-trained tends to increase as communities grow in size.

#### DENOMINATIONAL DIFFERENCES IN TRAINING

The relative number of ministers that are college or seminary graduates varies not only regionally but from denomination to

# UNTRAINED PROTESTANT AND CATHOLIC MINISTERS IN URBAN AND RURAL COMMUNITIES

BY DIVISIONS, 1926

denomination. Some bodies demand of their ministers far higher scholastic preparation than others. Replies from nearly 2,300 pastors of the United Lutheran Church of North America show that only 3.7 per cent. are non-graduates, compared with 79.3 among the 1,500 clergymen of the Colored Methodist Episcopal Church. Such differences are even more extreme than those among states.

In each division the priests of the Roman Catholic Church make a far better showing, particularly in rural areas, than the white Protestant ministers. The actual figures are presented graphically in the accompanying chart which shows that in the East South Central and the two North Central divisions the proportion of country priests classed as non-graduates is only about one-eighth of the combined average for the seventeen Protestant denominations.

In every case the rural ministers of the different Protestant denominations are not as well trained as are the urban ministers of the same body. For example, 43 per cent. of the rural and only 18 per cent. of the urban ministers of the Northern Baptist Convention are non-graduates. This means that denominations dominantly rural would be likely to make a poorer showing than those mainly urban. Because city and country conditions vary so widely, it was decided to consider urban and rural ministers separately in making comparisons among the individual Protestant denominations.

So far as rural ministers are concerned, the twenty Protestant bodies under investigation fall rather naturally into five groups of four denominations each.

The four in the group with the smallest proportion of non-graduates among their country pastors, are the Evangelical Synod of North America, the Reformed Church in the United States, and the two Lutheran bodies. In no one of these are more than 7.3 per cent. of the rural ministers without college or seminary training. In the case of the Evangelical Synod of North America the figure is as low as 4.8 per cent. This particular organization has an unusually large proportion of clergymen that are graduates of seminaries only, so that the proportion of its rural ministers that are graduates of both college and semi-

# UNTRAINED MINISTERS IN 21 SPECIFIED DENOMINATIONS IN URBAN AND RURAL COMMUNITIES 1926

nary is not strikingly high, being 60 per cent. compared with 77 to 80 per cent. for the other three bodies.

The second group, made up of denominations distinctly above average in their ministerial training, includes the two Presbyterian bodies, the Protestant Episcopal Church, and the Congregational Church. The widest difference in this group is shown by the Presbyterian Church in the United States with 15 per cent. of its rural ministers non-graduates, and the Congregational Church with 30 per cent.

In the third, or middle group, are the Northern Baptist Convention, the Disciples of Christ, the Methodist Episcopal Church and the Evangelical Church. From 43 to 62 per cent. of the country ministers of these denominations are non-graduates; and from 23 per cent. in the case of the Northern Baptist Convention to 10.5 in the case of the Disciples of Christ, are graduates of both college and seminary.

In the group falling just below average are the two Brethren bodies, the Methodist Episcopal Church, South, and the Southern Baptist Convention, with from 67 to 77 per cent. of the rural pastors non-graduates. In the case of the Southern Baptist Convention, 10.6 per cent. are graduates of both college and seminary; while only 4.1 per cent. of the ministers of the Church of the Brethren fall into this category.

Finally, the four denominations whose rural ministers have the least academic training include the three colored bodies and the Free Will Baptists. Here the proportions of country ministers without full college or seminary training are actually from 80 to 92 per cent.

It is significant that eleven of the twenty denominations, including the four largest Protestant denominations in the United States, report that more than half their rural ministers are not graduates of either college or seminary.

The ranking of Protestant denominations based upon the proportion of urban clergymen that are non-graduates, is, for fifteen of the twenty Protestant bodies, the same as their rural ranking. Indeed, the only major difference is that the Southern Baptist Convention, which ranked fifteenth on the basis of reports from rural ministers, changed places with the Evangelical Church and held twelfth place according to the reports of city pastors.

DENOMINATIONAL DATA BY DIVISIONS

Since denominations are largely localized geographically, the question arises as to how far do denominational averages reflect variations arising merely from their differing geographic locations. For instance, the data show that the Southern Baptist Convention has 70 per cent. of its rural ministers in the class with least training, while the Northern Baptist Convention has but 43 per cent. Are variations of this kind to be explained by differences in denominational policy or do they rather reflect geographic considerations?

This question can be answered by working out, for each denomination separately, variations in training from division to division. This makes it possible to show the extent to which the training of ministers varies from one division to another within the same denomination. In the cities of New England only 17 per cent. of the ministers of the Methodist Episcopal Church are classed as non-graduates contrasted with 52 per cent. in the West South Central states. Among the rural ministers of this same denomination these proportions vary from 43 per cent. in the Pacific division to 77 per cent. in the East South Central area. These differences are almost as wide as the variations among denominations and indicate that denominational averages are decidedly influenced by geographic considerations.

## Chapter VIII

### WHAT IS THE VALUE OF CHURCH PROPERTY?

Possibly the most astonishing figures collected by the 1926 Census are those relating to church finances. The era of economic prosperity which followed the Great War decidedly improved the financial position of the churches. As Dr. Beard points out in *The Rise of American Civilization*,<sup>1</sup> "In material equipment and capital investments, yearly gains were made that would have startled the bishops, trustees and deacons of the middle period."

#### TOTAL VALUE OF CHURCH PROPERTY

In 1926 the reported value of church edifices was more than \$3,840,000,000. Even this high total far underestimates the value of all church property. In the first place, not all churches reported upon the value of their edifices. Of the 204,500 churches that are known to have one or more edifices, only 203,000 gave their value. This means that 1,500 failed to report on this point. The church edifices omitted are presumably less valuable than the average, nevertheless had returns been received from all churches the total amount would have been increased.

Much more important than the number of churches that failed to report is the difference between the value of all church-owned property and the value of the edifices actually reported. As used by the Census, the "value of church edifices" comprises the estimated value of the church buildings owned and used for worship by the organizations reporting, together with the value of the land on which the buildings stand and the furnishings and other equipment owned by the churches and actually used in connection with church services. Where parts of a church building are used for social or educational work in connection with a

---

<sup>1</sup> Beard and Beard, *The Rise of American Civilization* (New York; Macmillan Company, 1927), Vol. II, p. 748.

church, the whole value of the building and its equipment is included, as it was found to be practically impossible to make a proper separation in such cases. However, the term does not include a number of items, of which parsonages alone are reported by the Census to be worth nearly \$500,000,000 additional. Thus it becomes apparent that the item of \$3,840,000,000 is only a part of the total value of church property.

Evaluations of other church holdings, such as educational institutions, hospitals and homes for the aged, missions, office buildings and printing plants, together with their endowments, are available for certain large denominations. If these figures are combined, and allowance is made for all the denominations for which figures are not available, such as the Roman Catholic Church with its thousands of parochial schools, and for Jewish Congregations with their Talmud Torah schools, it seems reasonable to conclude that the total value of church property in America, is in all probability at least \$7,000,000,000.<sup>2</sup> This figure is, of course, merely a rough estimate, and furnishes no basis for analysis or comparison; but the Census materials on edifice value alone are interesting on their own account, and presumably are indicative of the changes that have taken place in the financial status of the churches.

#### EDIFICE VALUES TODAY AND YESTERDAY

The total value of church edifices has been increasing very rapidly. It was \$1,258,000,000 in 1906, had increased to \$1,677,000,000 in 1916, and to \$3,840,000,000 in 1926.

During the past twenty years the most rapid increase in the total value of church edifices has taken place, not in the wealthy North nor in the rapidly growing far West, but in the South and Southwest. States like North Carolina, Arizona, and Oklahoma show increases since 1906 of more than 470 per cent.; but Florida holds the record with a growth in church edifice value from \$5,800,000 in 1906 to \$54,300,000 in 1926, or an increase of 837 per cent. Of course, this unusual figure is decidedly influenced by the fact that the last Census covers the very year when the great Florida land boom reached its peak.

<sup>2</sup>This estimate is based on the following detailed returns: 16 Protestant denominations reported educational institutions worth \$400,000,000, 12 Protestant denominations had philanthropic institutions and publishing concerns valued at \$106,000,000 and 12 had still other property estimated at \$90,000,000.

Because the regular Census reports of 1850 to 1870, and also for 1890, secured the total value of church edifices, it is possible to extend the comparison and contrast edifice values today with data for much earlier periods. Owing to the inflation following the Civil War, figures for 1870 are believed to be unreliable but those for other decades are presumably fairly accurate. Before presenting the actual amounts, however, it should be pointed out that prior to 1906 the method of obtaining information about churches was different from that employed since that date. Instead of applying directly to the local churches the Government obtained its information from denominational headquarters. Nevertheless this difference in the method of obtaining answers to its questions can hardly account for more than a fraction of the tremendous increase in the reported values of church edifices from only \$87,328,000 in 1850 to \$171,400,000 in 1860; then to \$679,000,000 in 1890. This means that the total value of church edifices in 1926 was worth about 45 times as much as in 1850.

#### UNEARNED INCREMENT

Because of steeply mounting building costs and land values, especially since 1916, it may be felt that a large part of the increase in the valuation of church property represents merely unearned increment rather than newly invested funds. The Government's figures do not distinguish between these two factors; but in the case of the Methodist Episcopal Church it has been possible from published sources to compare the amount of money actually invested in church buildings during the decade, with the net increase in the value of church edifices. This analysis, which has recently been published as part of the Institute's study of *Trends in Protestant Giving*,<sup>3</sup> reaches the conclusion that after all figures relating to indebtedness have been deducted, the entire increase in the value of church edifice and parsonage property during the decade was not appreciably greater than the actual investment of new money.

This comparison, therefore, would seem to indicate that the

---

<sup>3</sup> Fahs, *Trends in Protestant Giving* (New York; Institute of Social and Religious Research, 1929). On page 34 Mr. Fahs, commenting upon the increase between 1916 and 1926 in the value of church property of the Methodist Episcopal Church, says: "For the Methodist Episcopal Church, therefore, new money put into church and parsonage property during the decade almost equals the net increase in property values in the United States for that denomination, all figures for debt having been deducted."

increase in the value of church property is hardly at all a matter of unearned increment; but, even if it were, the chief significance of the Census figures would not be changed. The fact is that the churches in the United States, whether through unearned appreciation in the value of their properties or through the amount of new funds invested in lands and buildings, have become the

URBAN AND RURAL CHURCH EDIFICE VALUE  
PER ADULT MEMBER BY DIVISIONS  
1926

Chart XXVI

owners of real estate of enormous value. When it is remembered that church property in this country is, as a rule, untaxed, it becomes clear that the churches enjoy a position of exceptional privilege in the communities in which they are situated.

#### EDIFICE VALUES PER CAPITA

The edifice value per church of all organizations that reported in 1926 is nearly \$19,000, but in rural areas this figure is only \$6,200 as against \$53,000 in cities—an eight-and-one-half fold difference between the rural and the more elaborate city church.

The average church edifice is worth nearly three times as much today as twenty years ago. To a certain extent the rapid increase in the value of church edifices is but natural, not only because church-memberships have been steadily increasing, but also because of the shrinkage in the purchasing power of the dollar. The question therefore arises whether the present value of church edifices computed in terms of 1906 dollars represents a larger investment per member than was the case twenty years ago. To eliminate the effect of the growth in church-membership, all that is necessary is to reduce the figures to a per capita basis. Such a computation shows that the value of church edifices per adult member was \$39.46 in 1906 and \$44.37 in 1916, compared with \$86.63 now. Of course, these figures must be adjusted to allow for changes in the value of the dollar. Worked out in terms of a dollar having the same purchasing power as in 1906,<sup>4</sup> the 1916 average per adult member becomes \$30.71, while the latest figure is \$42.44. Thus it becomes apparent that between 1906 and 1916 church contributions per member did not begin to keep pace with increase in cost of living, but that during the last decade they rose so rapidly that they more than made up for the previous decline. In 1926 the average contribution per member had a purchasing power about 8 per cent. greater than in 1906.

#### DIVISIONAL AND DENOMINATIONAL DIFFERENCES

As a rule, urban churches are worth decidedly more per member than are rural churches. However, there are astounding

---

<sup>4</sup>Based on the combined index numbers of retail food prices of the United States Bureau of Labor Statistics. If Dun's *Index of Wholesale Prices* had been used, the ratio for 1916 would have been \$32.16 and for 1926, \$49.00.

# VALUE OF CHURCH EDIFICES PER ADULT MEMBER FOR PRINCIPAL DENOMINATIONS

1926

variations from division to division. In the New England States, rural churches represent a slightly greater investment per adult member than do urban churches; while in the East South Central division city churches are worth more than three times as much per member as are country churches. It might seem that these variations, which are shown in detail in Chart XXVI, are largely accidental, were it not for the fact that per capitas for church expenditures show virtually identical variations (See Chart XXXIV).

The value of church edifices per adult member has been rising less rapidly in large cities than in town and country areas. Between 1906 and 1926, the averages for cities of 25,000 and over did not quite double, increasing from \$53.67 to \$106.26. In town and country areas, however, these figures rose from \$31.53 to \$72.07, or about one-quarter more rapidly than those for metropolitan centers.

Among large denominations, the highest edifice value per adult member is reported by one of the newest bodies—the Church of Christ, Scientist, whose edifices represent an investment of nearly \$350 for each adult member. The Protestant Episcopal Church comes next with a per capita investment of \$230, followed by the Congregational and Northern Presbyterian bodies. These figures substantiate the general impression that these four denominations have relatively wealthy members.

Compared with white Protestant bodies, the Roman Catholic, Jewish, and Mormon churches have small amounts per adult member invested in church edifices. This does not mean that the churches of these denominations are comparatively inexpensive. Quite the reverse. The usual Roman Catholic church is worth \$52,000; while Jewish synagogues have an average value of \$86,000, which is higher than for any other large denomination in the United States. The point is that these non-Protestant churches operate fewer churches with larger memberships, thus materially reducing the per capita outlay for edifices.

The increase since 1906 in church property values per adult member show considerable variation among denominations. The most rapid gains are reported by the Church of Christ, Scientist, the Disciples of Christ, the Evangelical Synod of North America, and the Norwegian Lutheran Church of North America, each of which shows an increase of more than 300 per cent.; while the

per capita investments of the Methodist Episcopal Church, the Presbyterian Church in the U. S. A., and the Protestant Episcopal Church did not double. All other large bodies report increases of from 100 to 200 per cent.

#### VALUE OF CHURCH EDIFICES PER INHABITANT

The value of church edifices alone represents an investment of \$48.01 for every American over 13 years of age; but naturally

#### EDIFICE VALUE PER ADULT INHABITANT

1850, 1860, 1890, 1906, 1916, 1926

*Chart XXVIII*

these amounts vary considerably from place to place. City churches involve greater outlays than do country churches. In centers of 25,000 and over, the value of church edifices is equivalent to \$62.73 for every man and woman over 13 living there; but in town and country areas this amount is only \$38.20. In the Middle Atlantic states, these ratios are considerably higher than for other sections of the country, the combined figure for the larger cities of New York, Pennsylvania and New Jersey

# EDIFICE VALUE AND DEBT PER ADULT MEMBER

1906, 1916, 1926

Chart XXIX

# EDIFICE VALUE AND DEBT PER ADULT MEMBER BY STATES 1926

being \$75.88 per adult person, and for their town and country areas \$60.97. The Mountain division, which reports the lowest proportion of the population in church, naturally shows the lowest amounts invested in church property, with investments per adult inhabitant of \$46.72 and \$20.46 respectively.

The present investment of \$48.01 per adult inhabitant compares with \$24.57 in 1916 and with \$21.93 in 1906. Even these averages are far higher than the rough figures available for earlier decades. The returns secured in connection with the 1890 Census represent church edifice values per adult inhabitant of \$16.83, while the 1860 and 1850 returns are equivalent to \$9.16 and \$6.44 respectively; that is to say, the investment in church edifices per adult American has increased more than sevenfold during the last 76 years. These figures have not been adjusted to allow for fluctuations in the value of the dollar, nevertheless they clearly indicate a decided increase in terms of purchasing power.

#### CHURCH DEBTS

In view of the enormous increase in the value of church edifices, the amount of their debts becomes a subject of particular interest. To what extent has the increase since 1906, and particularly the very sharp increase since 1916, been actually paid for. Analysis shows that there has been an increase in the proportion of churches in debt. In 1906 the relative number was 18.1 per cent., compared with 21.7 in 1916 and 21.8 in 1926. Moreover, the indebtedness of those churches that report any has increased more rapidly than the average value of church edifices. The total amount of reported debts on church edifices, which was \$108,000,000 in 1906 and \$165,000,000 in 1916, reached \$433,000,000 in 1926. In other words, the 1926 indebtedness amounted to 11.3 per cent. of the total value of church edifices, compared with 8.6 in 1906 and 9.8 per cent. in 1916. In short, the indebtedness of churches has been increasing comparatively rapidly.

At the present time, the debt on church edifices is equivalent to \$9.76 per adult member; but this average varies with the size of the center involved, being only \$3.43 in rural areas, \$11.82 in towns below 25,000, and \$14.31 in cities of 25,000 and over.

During the past twenty years, the debts of churches in large

cities have not risen in relation to their memberships so rapidly as have those of town and country churches. In 1906 the debts of churches in centers of 25,000 and over were equivalent to \$6.15 per adult member, compared with \$14.31 now. In town and country areas, however, these averages have risen from \$1.85 to \$6.38 or decidedly more rapidly than in large cities.

## *Chapter IX*

### HOW MUCH DO CHURCHES SPEND?

From many points of view the amount of money that churches spend is a more significant index of their financial strength than is the value of the property they own.

During 1926 the expenditures of the churches that reported on this point amounted to \$817,000,000. This total covers all the monies expended by the local churches reporting, and includes not only such sums as the salaries paid to ministers, the cost of maintenance of church plants and the payments on debts but also contributions for benevolences, denominational support and all other purposes. However, even the large sum of \$817,000,000 is not the total amount raised in 1926 by church bodies. For one thing, 7 per cent. of the local organizations did not give their expenditures. Probably the churches that failed to report are below average; nevertheless it seems reasonable to assume that had data been received from all churches the expenditures of local churches would have been around \$840,000,000. Even this total omits sums not raised by local churches. For example, if in 1926 some wealthy donor had made a contribution directly to the Foreign Missionary Society of the Northern Baptist Convention, this money would not be included in the total, simply because it was not contributed through a local church. In the same way, any legacies or incomes from endowments received by the Foreign Missionary Society of this or any other denomination would not be included unless they happened to be credited to particular local churches. In short, the amounts reported to the Census are only those expended by local church organizations. Thus the total sums actually spent by church bodies are considerably in excess of \$840,000,000. Since the National Bureau of Economic Research estimates that in 1926 the national income of the United States was \$85,548,000,000, it becomes apparent that churches absorb at least 1 per cent. of the total.

More than \$10,000,000 in annual expenditures were reported for each of fifteen denominations, and at least \$1,000,000 each for thirty-three others. By far the largest total is reported by the Roman Catholic Church whose 1926 expenditure of \$204,500,000 represents a quarter of the national total. The Methodist Episcopal Church comes second with \$89,400,000, followed by the Presbyterian Church in the United States of America with \$63,200,000. The Protestant Episcopal Church, the Southern Baptist Convention, and the Methodist Episcopal Church, South, each claim local church expenditures of from \$40,000,000 to \$45,000,000. These half-dozen bodies account for three-fifths of all the expenditures reported.

INCREASE IN NATIONAL INCOME  
COMPARED WITH CHURCH EXPENDITURES  
1916 AND 1926

Chart XXXI

THE INCREASE SINCE 1916

Data about local church expenses were secured for the first time in connection with the 1916 Census, so that it is possible to compare expenditures of today with only those of a decade

ago. The annual outlay in 1926 was \$817,000,000, and that in 1916 was \$329,000,000; or a growth of 149 per cent. The investigations of the National Bureau of Economic Research discovered that between 1916 and 1926 the entire realized income of the United States rose from \$43,288,000,000 to \$85,548,000,000, or almost doubled. In other words, the increase since 1916 in the national income has been only two-thirds as rapid as the increase in annual church expenditures.

It is also illuminating to compare the expenditures of local churches with those for public education, which, as is well known, have been rising very rapidly. The official reports of the United States Bureau of Education state that public-school expenditures, which totaled \$641,000,000 in 1916, aggregated \$2,017,000,000 in 1926. This is an increase of 215 per cent., and compares with 149 per cent. for church expenditures.

For the country as a whole the average increase in church expenditures since 1916 has been one-and-a-half fold; nevertheless in Montana this rate was only 37 per cent., while in Florida it was 439. The New England states of New Hampshire and Vermont, and the West North Central states of Iowa, North and South Dakota, Nebraska, and Kansas, are the others in addition to Montana whose church expenditures did not double during the period; while the southwestern commonwealths of California, Arizona, Oklahoma and Louisiana show increases of from 200 to 372 per cent. All other states reported increase of from 100 to 200 per cent. However, when the 1926 figures are converted into dollars of the same purchasing power as those of 1916, Florida shows an increase of only 143 per cent., Louisiana 82 per cent., Nevada 78 per cent., and Arizona 76 per cent., while all other states had increases of less than 75 per cent.

#### LOCAL EXPENSES VERSUS BENEVOLENCES

In 1926 all the churches were asked to separate the amounts expended during the year into two parts, one comprising the cost of current expenses and improvements and the other the sums used for benevolences, missions and the like. These figures indicate in a general way the distribution of church expenditures between the requirements for local self-support and the contributions of the churches to broader interests. They show, when the returns that could not be classified are omitted, that 80 cents out

# EXPENDITURES PER ADULT MEMBER FOR PRINCIPAL DENOMINATIONS

1926

of every dollar were expended for local self-support. These proportions were virtually identical for both rural and urban churches, but differed greatly among denominations. There were 22 denominations that spent more than 90 cents out of each dollar for self-support, while 22 others contributed more to benevolences than to upkeep. In the group last mentioned were 8 Mennonite bodies; but the record is held by the Seventh Day Adventist denomination, which has reversed the general average and gives to benevolences 81 cents out of every dollar. The different interpretations attached to the term "missions and benevolences" undoubtedly help to explain the wide variations from denomination to denomination in the amounts spent for this purpose; but it also seems to be true that there are basic differences in the giving habits of church bodies. For instance, it is significant that the Seventh Day Adventist denomination, which gives the highest proportion to benevolences, not only practices tithing but does not, as a rule, pay its ministers a salary.

#### EXPENDITURES PER ADULT MEMBER

In 1926 the expenditures of the churches that reported amounted to \$18.44 for each member 13 years of age and over. If this ratio is adjusted to allow for changes in the price level, it becomes \$13.06, compared with \$8.70 in 1916, or an increase of 50 per cent. in the purchasing power of the average church-member's contribution. Of course it should be recalled that 1916 was a year in which living costs were rising very rapidly.

The Protestant denominations, which have already been shown to have relatively large investments in church buildings, reported relatively high per capita expenses in comparison with Roman Catholic, Mormon, and Jewish bodies. The average expenditure per adult Roman Catholic is only \$15.37, the Jewish figure is \$6.52, and the Mormon \$6.06; but this last is influenced by the fact that the Mormons do not pay salaries to their ministers.

In view of the small expenditures per adult member of Roman Catholic and Jewish Congregations, it is surprising to find that the churches of these denominations report the largest expenses per church with averages of more than \$12,500 each, contrasted with a national average of only \$3,800. The explanation is again to be found in the policy of these bodies to operate churches with

# RURAL CHURCH EXPENDITURES PER ADULT MEMBER 1926

large memberships, thus distributing the cost among comparatively large groups of members.

Negro Protestant bodies, of course, show much lower average expenditures per member than the white Protestant denominations. Among colored bodies the usual member over 13 years of age contributes \$9.15, contrasted with \$19.54 for the members of white Protestant denominations.

The large denominations with the highest annual expenditures per adult member were the very ones that reported the highest edifice values per capita. The Christian Science members again lead with a yearly expenditure of \$70.27, which is roughly double that for any other large denomination; while the two largest Presbyterian bodies, the Protestant Episcopal Church, and the Congregational churches report more than \$30 each.

Analysis of the returns from the twenty-two largest bodies shows that between 1916 and 1926 only seven of them failed at least to double their annual expenditures per adult member. In the case of the Churches of Christ, the increase was actually more than fourfold. However, when this figure is adjusted to represent 1916 dollars, it shows about a 200 per cent. increase. No other denomination showed on this basis an increase of as much as 100 per cent.

#### URBAN-RURAL DIFFERENCES

The average rural church expends only \$1,400, which contrasts with \$10,000 for city churches; nevertheless the usual country church costs its adult members \$13.27, compared with \$21.50 in urban organizations. The point is that even the small expenditures of country churches must be borne by comparatively small groups of members.

There is more regional variation in rural expenditures per adult member than in urban. The rural average is lowest in the Southern states, especially in Kentucky, Tennessee, Alabama and Mississippi, in which states it is only \$7.54, and highest in the Middle Atlantic and Pacific areas, where the average is \$21.94 and \$20.72 respectively. The urban expenditures on the other hand are lowest in the mountain states where \$16.68 is the average expenditure per adult member, and highest for the states along the Pacific and South Atlantic coasts where the averages are \$26.01 and \$25.83.

# URBAN AND RURAL CHURCH EXPENDITURES PER ADULT MEMBER BY DIVISIONS 1926

Chart XXXIV

Because rural and urban churches were not separately tabulated prior to the 1926 Census, it is impossible to compare the per capita increases since 1916 in these two types of churches; but it is possible to contrast averages for large cities and for places outside these centers. The expenditures per member of churches in cities of 25,000 and over have increased since 1916 slightly more rapidly than those in town and country areas. In 1926 churches in large cities spent \$21.17 per adult member, and only \$9.19 in 1916. Comparable figures for churches in town and country areas were \$16.41 in 1926 and \$8.40 in 1916.

#### EXPENDITURES PER INHABITANT

Computed in terms of the average outlay per adult inhabitant, the 1926 expenditures of local churches represent \$10.22 for every person 13 years of age and over. This figure, however, is higher in large cities than in places of smaller size. In cities of 25,000 and over, the average is \$12.50, contrasted with \$8.70 in town and country areas.

The highest average expenditures per adult inhabitant are reported by the bigger cities of Kentucky, Tennessee, Alabama, and Mississippi, where annual local church expenses are equivalent to \$15.90 per adult inhabitant. This is an area in which Protestantism is unusually strong. In the South Atlantic states the average for large cities is \$14.69, and in the Middle Atlantic states \$13.43. In the big urban centers of the Mountain division this figure is \$10.10; and on the Pacific Coast it is only \$8.62. In all other divisions these averages range from \$11.48 to \$12.55.

For town and country areas, the Middle Atlantic division shows the highest figure, with \$12.29 per adult inhabitant; while the Mountain states again report the smallest amount, with an average of \$4.93.

During the past ten years, average expenditures per inhabitant more than doubled, increasing from \$4.82 in 1916 to \$10.22 in 1926. In terms of 1916 dollars the 1926 average expenditures would be \$7.24. Thus even after allowance is made for the increase in population and for the increase in the price level, contributions per inhabitant had in 1926 a purchasing power 50 per cent. greater than those of 1916.

## APPENDIX

## APPENDIX

The material given in this appendix as well as in the preceding text is not in any sense a duplication of the data published by the Census Bureau, but consists in nearly every case either of ratios derived from figures in the volumes of the *Census of Religious Bodies* or of unpublished tabulations made by the Census Bureau. There is also in the Government's publication a great mass of material that was not drawn upon in this analysis.

As the tables in this appendix consist primarily of derived ratios, anyone interested in using the basic figures will have to consult the Religious Census. The tables go into far greater detail than the mere requirements of the text necessitate, as it is hoped that they will be of service to a variety of people interested in figures for particular areas and particular denominations.

Along with the derived ratios, are given estimates of population 14 years of age and over, and of church-members 13 years of age and over, which have been computed for 1906, 1916 and 1926. These appear in Tables I and II.

Figures of certain denominations that have undergone organic change have been adjusted to make them comparable for 1906, 1916 and 1926, and are published in detail.

The appendix also includes certain unpublished data tabulated by the *Census of Religious Bodies* on the training of the ministers of seventeen white Protestant denominations, and three Negro Protestant denominations, and the priests of the Roman Catholic Church—in all 105,000. In addition there are statistics for these same denominations, showing the number of churches whose ministers reported serving a specified number of points.

Some other church statistics referred to in the text, such as the average value of edifices per church, will be found in the 1926 *Census of Religious Bodies*, unless otherwise stated.

Certain facts concerning the methodology will be of use to the reader in interpreting the tables. The adult population for 1906 was estimated by adding to the total population 14 years of age and over in 1900, six-tenths of the difference between the 1900

and 1910 figures. The estimate for 1916 was computed by using the 1910 and 1920 figures similarly. For 1926 the adult population was computed by taking the total figures estimated by the United States Census Bureau for that year and multiplying them by the per cent. of the population that in 1920 was over 14 years of age.

Adult population estimates for the three periods were computed for all cities that had 25,000 or more inhabitants at the time of the preceding Census. These cities were then classified into the following size-groups by divisions: 300,000 and over; 100,000 to 300,000; 50,000 to 100,000; 25,000 to 50,000. Figures for districts outside principal cities were obtained by subtracting the totals for these cities from the state totals. Separate population estimates for Negroes and whites, and for men and women, were computed in the same way as for the total population.

The adult-membership figures represent the proportion of members over 13 years of age as reported by the Census of Religious Bodies. Since the Jewish Congregations did not report as to the age of their members, it was assumed that the proportion of Jewish adults was similar to that of Roman Catholic members. This procedure was adopted because the Jewish definition of a "member" is at least as inclusive as that of the Roman Catholic. All members of the Churches of Christ were considered as adult because 98 per cent. were over 13 years in 1916. In the tables dealing with the geographic distribution of total adult membership, the members for whom no age was reported were distributed on the same basis as the reported membership.

There are 62,017 adult members of the Church of Christ, Scientist, and 668 of the American Theosophical Society, who were not distributed geographically in the report of the *Census of Religious Bodies*. The national total for the geographic tables is therefore 62,685 less than the total when separate denominations are added together, as in Table XXIV.

The adult membership for each denomination was estimated on the assumption that the members who did not report were divided as to age in the same way as those who did report.

For 1916 the number of adult members by states was estimated by assuming that, with Jews excluded, the rate of increase or decrease for the adult membership was the same as for the total membership. Therefore to arrive at 1916 figures, the 1926

adult-membership figures were divided by this rate of increase or decrease plus 100 per cent. The 1906 adult membership was computed by the same method.

For increase in the principal denominations, adjustments were necessary for members of Lutheran bodies and the Protestant Episcopal Church, because of their different bases of reporting prior to 1926. In the last Census all baptized persons were reported, but previously only communicants were counted as members. Therefore the 1906 and 1916 figures for these denominations were adjusted to make them comparable with those for 1926. This adjustment was made on exactly the same basis as that employed by the Government. For the detailed statement of this method, see page 48 of Volume I of the *1926 Census of Religious Bodies*.

Since 1916 the colored organizations formerly connected with the Northern Baptist Convention have united with the Negro Baptists. These figures have been subtracted from the former and added to the latter for church organizations, members, edifice value, expenditures, and Sunday-school scholars. Since figures for the Southern Baptist Convention prior to 1926 include statistics for the American Baptist Association, figures for this denomination have been added to all the statistics for the Southern Baptist Convention in 1926 in the tables showing increases. Since 1916, the Eastern and Western Hungarian Classes of the Hungarian Reformed Church in America have been transferred to the Reformed Church in the United States. These figures were added to those of the Reformed Church in the United States for 1906 and 1916 to make the statistics comparable. However, part of the Hungarian Churches did not amalgamate with the Reformed Church in the United States but formed the Free Magyar Reformed Church in America. These figures of the Free Magyar Reformed Church in America have therefore been added to those of the Reformed Church in the United States for 1926 in making comparisons with the earlier decades. When the Norwegian Lutheran Church of America was formed by the union of three denominations, certain churches did not join the amalgamation but formed the Norwegian Synod of the American Evangelical Lutheran Church. To make the 1926 statistics of the Norwegian Lutheran Church of America comparable with the available figures for the earlier years, the statistics

of the Norwegian Synod of the American Evangelical Lutheran Church have been added for 1926. These adjusted figures will be found in Table XXVII which shows increase in membership for 1906, 1916 and 1926. The unadjusted figures are used, however, in the tables giving denominational comparisons for 1926 alone.

To make the figures showing increase in the number of churches for all denominations comparable for 1906, 1916 and 1926, Jewish Congregations have been excluded because figures for earlier census periods are known to be unreliable.

For Negro adult membership, the ratio of members over 13 years for the twenty-four wholly Negro denominations was used in estimating the adult members in the colored congregations of other denominations.

The child population under 19 years of age used in computing the Sunday-school ratios was estimated in the same way as the adult membership.

## INDEX

- Active membership, 7
- Adult membership,
  - changes in, by denominations, 52
  - changes in, by sex and race, 49
  - church edifice values per, 80, 81, 84-86
  - debt on edifices per, 86
  - definition of, 2
  - denominations, 18, 20
  - expenditures per, 92
  - geographic changes in, 50
  - growth in, 49
  - proportion varies from area to area, 11
  - social conditions affecting, 12
  - varies widely from state to state, 27
- Adult population, and adult membership, 106-111
- America Comes of Age*, by Andre Siegfried, 27
- Attendance, church,
  - average rural and urban membership, 2
  - ratio of membership and, 9
- Benevolences, 90
- Children, in church membership, 7
- Church membership, see "Membership, church" and also "Churches"
- Church schools, see "Sunday schools"
- Churches,
  - amount of annual expenditures, 89
  - amount of money spent, an index of financial strength, 88
  - and consolidation, 47
  - and national income, 88
  - and program, 41
  - average increase in expenditures, 90
  - benevolences, 90
  - combined into circuits, 43
  - contributions, 80
  - contributions per inhabitant, 96
  - coöperation among, and elimination of overlapping, 46
  - Churches—*Continued*
  - debts, 86
  - decline in number of, in certain states, 47
  - distribution of, 34-39
  - distribution of, and ministers, 42
  - distribution of, by population, 31
  - edifice values per capita, 80, 81
  - expenditures, 88-96
  - expenditures, growing, 5
  - expenditures of, compared to schools, 90
  - expenditures, per adult member and inhabitant, 118
  - expenditures per inhabitant, 96
  - finances, and economic prosperity in the U. S., 4
  - growth in population compared to number of, 46
  - growth of compared to schools, 47
  - in relation to population, 30
  - increase and decrease of, 46
  - increase in expenses, 89
  - increase in national income and church expenditures, 90
  - increase in value of, 77
  - local expenses vs. benevolences, 90
  - members to a, 39, 40
  - mergers, 45
  - non-protestant churches operate fewer, with larger memberships, reducing per capita outlay, 82
  - number of, 30
  - number of, increase for principal denominations, 140
  - number of scholars to a, 60
  - parsonages, value of, 77
  - per cent. of men and women in, 120-124
  - taxation, 79
  - total value of, 76
  - unearned increment, 78
  - unusual increase in number of, in mountain states, 47
  - value of, 76

- Churches—*Continued*  
 values of edifices, and value per adult member, 112-117, 125, 126, 143  
 value of, per inhabitant, 83  
 values of, today and yesterday, 77
- Cities,  
 significant differences in, 17  
 size of, does not influence relative number of people belonging to a church, 17
- Congregational churches, distribution of, 35
- Consolidation, affecting churches, 47
- Contributions, church, 80  
 per inhabitant, 96
- Debts, church, 86  
 on edifice value per adult member, 127, 128
- Denominations,  
 adult membership by, 18-20  
 by families, 25, 26  
 by states, 27, 28  
 changes in adult membership by, 52  
 changes in Sunday schools by, 58  
 concentration, geographically, 32  
 data on ministers of, by divisions, 75  
 differences in training of ministers, 70  
 increase and decrease of, 45  
 increase and decrease of churches by, 48  
 Negro, 21  
 numbers of, 19  
 ratio of male to female membership in a, 25  
 rural, 22, 23  
 sex, 23, 24  
 size of, 19  
 untrained ministers in specified, 73  
 urban, 22, 23  
 white, 21
- Douglass, Dr. H. Paul, *1,000 City Churches*, 58
- Economic conditions and church membership, 12
- Expenditures, church, 88-96  
 average rural and urban, 2  
 gaining, 5  
 per adult member and inhabitant, 118, 129, 130, 132-139
- Faahs, *Trends in Protestant Giving*, 78
- Farm values, correlated with contributions of rural church members, 12
- "Federated Churches," 45
- Financial conditions, 76-87  
 amount of money spent by church an index of, 88
- Finances, church, and economic prosperity in the U. S., 4
- Foreign-born, and proportion of Roman Catholic membership, 27
- France, A Study in Nationality*, by Andre Siegfried, 27
- Geographic areas,  
 and adult membership, 11  
 changes in, and the church, 50  
 denominational concentration, 32
- Inactive membership, 7
- Income, national and churches, 88
- Increment, unearned, 78
- Independent Churches, 45
- Inhabitant, church expenditures per, 96
- Jewish congregations,  
 distribution of, 34  
 number of members to a congregation, 41  
 predominate where, 29  
 proportion of adult membership of, varies from state to state, 2
- Membership, church,  
 active, 7  
 adult, 6, 13  
 adult, definition of, 2  
 and suicide, 12  
 child, 7  
 church edifice values per, 80, 81  
 denominations, 18, 20  
 denominations, varies by state, 27, 28  
 differences in cities, 17  
 geographic changes and, 50  
 growth of, 49  
 in cities of varying sizes, 15  
 inactive, 7  
 increase in, per church, 52  
 increase, rate of, 3  
 meaning of, varies, 6  
 Negroes, 8, 11

Membership, church—*Continued*  
     proportion varies from area to area, 11  
     race, 9  
     race and sex differences, 49  
     ratio of, closely correlated with attendance, 9  
     sex, 9  
     sex and race differences, 49  
     sex of, by denominations, 23, 24  
     size of a church, and its program, 41  
     social and economic conditions and, 12  
     Sunday school enrollment, 3  
     to a church, 39, 40  
     urban churches lead in adult, 15  
 Men,  
     as church members, 9, 14  
     denominations predominantly for, 25  
 Mergers, of church bodies, 45  
 Methodist Episcopal Churches,  
     decline in number of, 48  
     distribution of, 37  
 Methodist Episcopal Church South,  
     distribution of, 38  
 Ministers,  
     denominational data by divisions, 75  
     denominational differences in untrained, 73  
     distribution of churches and, 42  
     education of, 4  
     interpretation of "college" and "seminary," 63  
     national averages on training of, 62  
     Negro, supplement the work of the pastorate, 43  
     number of rural physicians compared to, 66  
     proportion of untrained, 63  
     proportion of urban Protestant ministers well-trained, 67  
     Roman Catholic, better trained than Protestant, 72  
     rural and urban differences in education of, 4  
     rural returns on training of, by states, 68  
     serving more than one church, 42
